Abstract	iii
Thai Abstract	vi
Table of Contents	viii
List of Figures	xi
List of Tables	xii
List of Appendix Tables	xiii
Chapter 1 INTRODUCTION	1
Chapter 2 LITERATURE REVIEW	4
2.1 Why intercropping (?)	4
2.2 Indices used in evaluating intercrop advantage	5
2.3 Relative time of sowing component crops	8
2.4 N economy of the intercrop system	10
2.4.1 N ₂ fixation by the legume component	10
2.4.2 Nitrogen transfer	12
2.4.3 Residual N of leguminous crops	13
Chapter 3 MATERIALS AND METHODS	15
3.1 Experiment I - Screenhouse experiment	15
3.2 Experiment II - Intercropping upland rice and rice bean	16
3.2.1 Field experiment	16
3.2.2 Sampling procedures and data collection	19
Dry matter	19
Sap bleeding	20

	Nodulation	20
	Total nitrogen	21
	Grain yield and yield components	21
	3.2.3 Chemical analysis, determination of plant nitrogen derived from N ₂ fixation	22
	3.3 Experiment III - Residual effects of the bean treatments on the subsequent corn crop	25
	3.4 Statistical analyses	27
Chapter 4	RESULTS	28
	4.1 Experiment I Ureide determination and calibration from screenhouse experiment	28
	4.2 Experiment II Intercropping system with delayed sowing of rice bean into upland rice	31
	4.2.1 Dry matter yield	32
	4.2.2 Grain yield and yield components	32
	4.2.3 Total nitrogen yield	35
	4.2.4 Land equivalent ratio (LER)	36
	4.2.5 Nodulation	37
	4.2.6 Nitrogen fixation	37
	The relative abundance of ureides (RU)	37
	The proportion of total plant nitrogen derived from N ₂ fixation (Pfix)	39
	The amount of nitrogen fixed	40
	4.3 Experiment III Effects of rice bean cropping system on a subsequent corn crop	42

4.3.1	Dry matter yield	42
4.3.2	Grain yield and yield components	42
4.3.3	Crop total N	44
4.4	Simple nitrogen balance of rice-corn, and rice/rice bean-corn cropping system	44
Chapter 5	DISCUSSION	47
5.1	Evaluation of component crops in intercropping system	47
5.2	Intercropping system evaluation	49
5.3	Nitrogen fixation	50
5.4	Effects of rice bean cropping system on a subsequent corn crop	52
5.5	Nitrogen balance in rice-corn and rice/rice bean-corn cropping systems	53
5.6	Economic considerations	59
Chapter 6	CONCLUSION AND RECOMMENDATIONS	61
6.1	Conclusion	61
6.2	Recommendations	62

LIST OF FIGURES

Figure		Page
1	Flow chart on the process of estimating nitrogen fixation (Wang, 1990).	24
2	Relationship between the relative abundance of ureides in root-bleeding sap and the proportion of N derived from fixation of rice bean. Calibration obtained from screenhouse experiment conducted (—). SE is the standard error of the mean relative values($\pm 3\%$). Reference calibration for rice bean obtained in glasshouse study (---) by Rerkasem and Rerkasem (1990).	30
3	Effects of intercropping on dry matter accumulation (a) and total nitrogen yield (b) in rice. * is the standard error at each harvest. ■ Monocropped rice; ▨ Intercropped rice with rice bean sown simultaneously; ▩ Intercropped rice with intermediate bean sowing; ▪ Intercropped rice with late bean sowing.	33
4	Effects of intercropping on the relative ureide (a) and proportion of nitrogen fixed (b) over time. Bars represent standard error for RU (a) and Pfix (b) values. (—) Represents monocrop treatments; (---) Intercrop treatments; (+) Simultaneous sowing; (*) Intermediate sowing; (□) Late sowing.	41
5	Simple diagrammatic representation on the nitrogen balance of the cropping system. (---) Represents the amount of nitrogen not determined; NB Nitrogen balance.	55
Appendix Figure		
1	Layout of field experiment (Randomized Complete Block Design)	70

LIST OF TABLES

Table		Page
1	Mean monthly temperature and rainfall during the experimental period	17
2	The treatment combinations used in the experiment	18
3	Degree of nodulation in rice bean from greenhouse experiment	28
4	Rice bean shoot dry matter (kg/ha) over time	34
5	Effects of intercropping on grain yield and yield components of rice	35
6	Effects of intercropping on grain yield and yield components of rice bean	36
7	Total nitrogen (kgN/ha) in rice bean shoot dry matter as influenced by intercropping	38
8	Differences in rice bean nodulation during late vegetative stage (V20) as influenced by intercropping	38
9	Accumulated amount of N ₂ fixed, total N (kgN/ha) and % N fixed over time	43
10	Dry matter, grain yield and yield components of corn grown after pure crops and mixtures of upland rice and rice bean	43
11	Total nitrogen (kgN/ha) in dry matter and grain of corn	44
12	Effects of intercropping on rice bean nitrogen balance at stage V20	46
13	Simple N-balance (NB) of rice-corn, and rice/ rice bean-corn cropping systems	46
14	Component crop yields (t/ha) of four cropping systems	60
15	Gross return (Bht/ha) of four cropping systems	60

LIST OF APPENDIX TABLES

Appendix Table		Page
1	Accumulation of total dry matter (kg/ha) in rice as influenced by intercropping	71
2	ANOVA of total dry matter in rice at three growth stages	71
3	ANOVA of grain yield & yield components of rice	71
4	Total N (kg/ha) in rice straw and seeds	72
5	ANOVA of total N in rice straw and seeds	72
6	ANOVA of shoot dry matter in rice bean	72
7	ANOVA of grain yield & yield components of rice bean	73
8	ANOVA of nodule number and nodule dry weight in rice bean during late vegetative stage (V20)	73
9	The relative ureide index (RU %) of rice bean as influenced by intercropping	73
10	ANOVA of the relative ureide index of rice bean	74
11	The proportion of nitrogen fixed (Pfix %) by rice bean as influenced by intercropping	74
12	ANOVA of the proportion of N fixed by rice bean	74
13	Total nitrogen (kgN/ha) in shoot dry matter of rice bean as influenced by intercropping	75
14	ANOVA of total nitrogen in shoot dry matter of rice bean	75
15	Amount of N ₂ fixed (kgN/ha) by rice bean over time	75
16	ANOVA of the amount of N ₂ fixed by rice bean over time	76

17	ANOVA of the nitrogen balance of rice bean at stage V20	76
18	ANOVA of two nitrogen balances (NB) of four cropping systems	76
19	ANOVA of shoot dry matter (t/ha) in corn as influenced by preceding treatments	77
20	ANOVA of grain yield & yield components of corn	77
21	Total N yield (kgN/ha) in seed and dry matter of corn as influenced by preceding treatments	77
22	ANOVA of component crop yields of four cropping systems	78
23	ANOVA of gross return (Bht/ha) of four cropping systems	78
