ACKNOWLEDGEMENT

First of all, I would like to express my deepest appreciation and respect to Dr. Manas Titayavan, the chairman of my thesis committee and academic advisor, whose invaluable supports, guidance, suggestions and encouragements in the whole process of the study enabled me to complete my thesis.

My sincere thanks and respects go to my thesis committee members, Dr. Sakda Jonkaewattana, Mr. Phrek Gypmantasiri and Dr. Thiti Budharugsa for their keen considerations, encouragements and providing valuable comments in completing this thesis research.

I am very much thankful to Dr. Argoon Lewanich and the staff of DOA who assisted me to identify insect specimens. I am also grateful to the officers and staff of MCC for providing various assistances and helps, particularly Khun Jamlong for the field experiment management and Khun Nuansri for the administrative activities.

I also express my sincere gratitude to Mr and Mrs Kauffman, Director of Center for Education and Exchange Program, Mennonite Central Committee (MCC) for their generous scholarship support and Prof. Y Ngong Nie Kdam, Rector of Tay Nguyen University, who gave me the permission and encouragement for the smooth completion of Master degree at Chiang Mai University.

I also take this opportunity to extend my sincere regards to all my friends in the Agricultural Systems Program who have shown their genuine kindness and friendships, especially my Vietnamese friends De, Tuyen, Phu, Dung, Dac, Kinh and Tam.

Finally, I am highly indebted to my mother Aduon Denar for her consistent support and encouragements while I am far from home. This thesis would not have been completed without the sources of inspirations and dedications of my beloved wife Nam and my son Zina who left my company throughout the study period in Thailand.
