CHAPTER 3 MATERIALS AND METHODS

3.1 Field survey 17

3.2 Field Experiment 18

3.2.1 Material and experimental site 18

3.2.2 Sampling procedures and data collection 19

3.2.2.1 Soil samples 19

3.2.2.2 Plant samples 19

3.2.3 Chemical analysis 20

3.2.4 Economical analysis 21

CHAPTER 4 RESULTS AND DISCUSSION OF FIELD SURVEY 22

4.1 Study site 22

4.2 Soil type and soil characteristics 22

4.3 Climatic conditions 25

4.4 Land use 28

4.5 Mungbean in cropping systems 30

4.6 Mungbean practices 35

CHAPTER 5 RESULTS OF EXPERIMENT 37

5.1 Effects of liming and phosphorous fertilizer application on available phosphorous, exchangeable Al\(^{3+}\) and soil pH 37

5.2 Effects of liming and phosphorous fertilizer application on available phosphorous, exchangeable Al\(^{3+}\) and soil pH 39

5.2.1 Above ground dry matter 39
5.2.2 Root dry weight 41

5.3 Response of number of nodule to phosphorous fertilizer 44

5.4 Response of plant height to phosphorous fertilizer application 47

5.5 Response of yields and yield components to phosphorous fertilizer application rates 49

5.5.1 Number of pod per plant 49

5.5.2 Number of seed per pod 50

5.5.3 100-seed weight 51

5.5.4 Response of seed yield to phosphorous fertilizer 52

5.6 Response of N, P, K content in the youngest fully expanded leaf (YFEL) of mungbean to phosphorous fertilizer application rates 53

5.7 Economic consideration 55

CHAPTER 6 DISCUSSION OF EXPERIMENT 58

6.1 Effect of phosphorous fertilizer on exchangeable Al³⁺, available phosphorous and soil pH 58

6.2 Response of mungbean growth, yield, and yield components to phosphorous fertilizer 59

6.2.1 Plant height 59

6.2.2 Nodulation 60

6.2.3 Dry matter 61

6.2.4 Yield components 62

6.2.5 Seed yield 62
6.2.6 Potassium, nitrogen and phosphorous concentration

of YFEL in V4 63

6.3 Economic consideration 65

CHAPTER 7 CONCLUSION AND RECOMMENDATION 67

7.1 Conclusions 67

7.2 Recommendations 68

REFERENCE 69

APPENDIX 77

CURRICULUM VITAE 107
LIST OF TABLE

Table 1. Some main soil types in Thua Thien Hue province 23
Table 2. Some main characteristics on Yellow-Red Ferralitic Soils 24
Table 3. Some chemical characteristics of mungbean soil 24
Table 4. Sown area of some main crops in Huong Tra district 29
Table 5. Average yield, mungbean area and total annual crop 32
area of household in Binh Dien and Huong Ho
Table 6. Yield ranges of mungbean in Huong Ho and Binh Dien 33
Table 7. Role of mungbean in farming systems in the two 34
communes interviewed
Table 8. Mungbean practices from farmers in Huong Ho and Binh Dien 36
Table 9. Average fertilizers applied in mungbean fields in both villages 36
Table 10. Chemical characteristics of soil in experimental site, Huong Ho, 1998 37
Table 11. Analysis of variance of above ground dry matter 40
Table 12. Effect of phosphorus fertilizer on average above ground dry 40
matter by phosphorus fertilizer in V4, R4 and R6
Table 13. Average above ground dry matter by variety in V4, R4 and R6 41
Table 14. Analysis of variance of root dry weight

Table 15. Effect of phosphorous fertilizer on average root dry weight in three stages of mungbean growth

Table 16. Average root dry weight by variety in V4, R4 and R6

Table 17. Analysis of variance of number of nodule in V4 and R4

Table 18. Analysis of variance of plant height of mungbean at three stages of growth

Table 19. Analysis of variance of seed yield, number pod per plant, number seed per pod and 100-seed weight

Table 20. Analysis of variance of nitrogen, potassium and phosphorous Concentration in the youngest fully expended leaves (YFEL) at vegetative stage, V4

Table 21. Response of average concentration of phosphorous of YFEL to phosphorous fertilizer at V4

Table 22. Response of average concentration of potassium of YFEL to phosphorous fertilizer at V4

Table 23. Average gross margin comparison among different treatments

Table 24. Economic consideration for different treatments
LIST OF FIGURE

Figure 1 The study site, Thua Thien Hue province 2
Figure 4.1 Rainfall and temperature of Thua Thien Hue for 14 years (84-97) 26
Figure 4.2 Temperature, rainfall, and evaporation of Thua Thien Hue, 1998 27
Figure 4.3 Sunshine hour and air humidity of Thua Thien Hue, 1998 27
Figure 4.4 Grown area of some main rainfed crops over years in Huong Tra District 29
Figure 4.5 Some main cropping patterns in the two villages surveyed 31
Figure 5.1 Changes of available P, pH, and exchangeable Al$^{3+}$ in the experimental soil after liming and applying phosphorous fertilizer 39
Figure 5.2 Response of the root dry weight to phosphorous fertilizer application rates at V4, R4 and R6 43
Figure 5.3 Response of number of nodule of different mungbean varieties to phosphorous fertilizer application rates in V4 and R4 46
Figure 5.4 Response of plant heights of different mungbean varieties to P fertilizer Application rates in V4, R4 and R6 48
Figure 5.5 Response of number pod per plant of different mungbean varieties to P fertilizer application rates 50
Figure 5.6 Number of seed per pod in response to phosphorous fertilizer application rates 51

Figure 5.7 Response of 100-seed weight of different mungbean varieties to phosphorous fertilizer application rates 52

Figure 5.8 Response of seed yield of different mungbean varieties to phosphorous fertilizer application rates 53

Figure 5.9 Response of nitrogen concentration in YFEL to different phosphorous fertilizer application rates 54

Figure 5.10 Relationship between gross margin and different phosphorous fertilizer application levels 56
