

TABLE OF CONTENTS

Contents	Page
Acknowledgement	iii
Abstract in English	v
Abstract in Thai	vii
Table of contents	ix
List of Tables	xi
List of Figures	xiii
Abbreviation	xv
Chapter 1	INTRODUCTION 1
1.1	Introduction 1
1.2	Rationale 2
1.3	Objective 3
Chapter II	LITERATURE REVIEW 4
2.1	FAO land evaluation procedure 4
2.2	Automated method in land evaluation 5
2.3	Evaluating Overall Physical Suitability Method 6
2.4	Application of geographic information system in land evaluation 9
2.5	Land mapping unit delineation 10
2.6	Land evaluation in Vietnam 15
Chapter 3	RESEARCH METHOD 19
3.1	Study area 19
3.1.1	Geographical location and administrative setting 19
3.1.2	Topographic condition 20
3.1.3	Hydro meteorological condition 21
3.1.4	Natural resource: land and mineral resource 23

3.2	Existing land use types	26
3.3	Frame work of the study	28
3.4	Data collection	29
3.5	Data transformation	30
3.6	Land Mapping Unit (LMU)	31
3.7	Identification of Land Utilization type (LUT)	31
3.8	Land Use Requirement (LUR)	32
3.9	Selecting land quality	36
3.10	Physical suitability	36
3.11	Land allocation for LUTs	39
Chapter 4	RESULTS AND DISCUSSION	41
4.1	Economic development	41
4.2	Assessment of existing land use	44
4.2.1	Change of land use	45
4.2.2	Change of agricultural land during the period of 1998-2003	49
4.3	Land evaluation	52
4.3.1	LMU and LC	52
4.3.2	Land use types for land evaluation	54
4.3.3	Land use requirements of LUTs	57
4.3.4	Land quality	58
4.3.5	Physical suitability	63
4.3.6	Land allocation for selected crops	69
4.4	Examples of scenarios for land use planning	74
Chapter 5	CONCLUSION	78
	REFERENCES	81
	APPENDICES	87
	CIRRICULUM VITAE	96

LIST OF TABLES

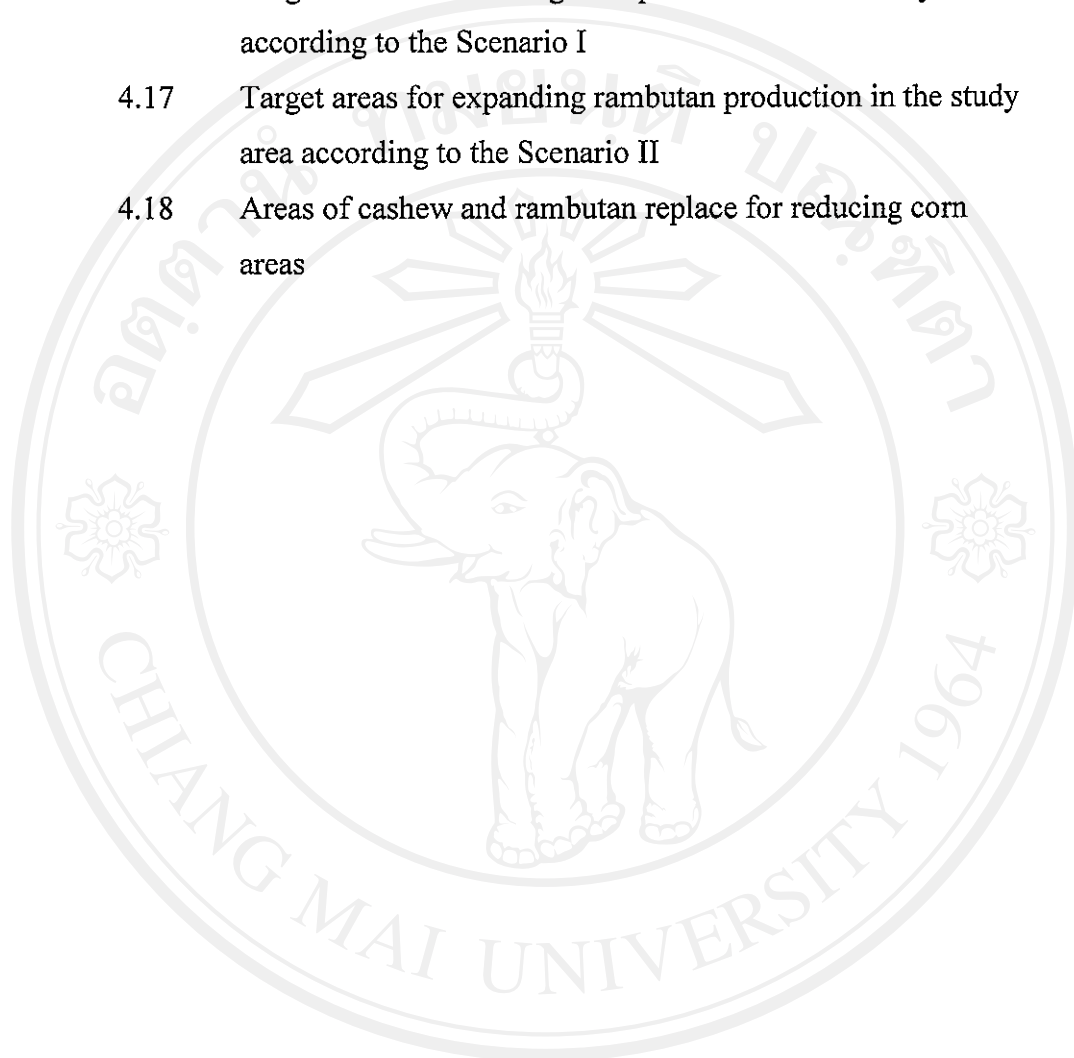

Tables	Page	
2.1	The symbols used in the FAO land evaluation method	5
3.1	Distribution of land in administrative boundary	20
3.2	The climate of Dinhquan district	22
3.3	Soil types in Dinhquan	24
3.4	Structure of land use types of Dinhquan in 2003	27
3.5	LUR for irrigated summer rice crop and main rice crop	33
3.6	LUR for rainfed summer corn and winter corn	34
3.7	LUR for rainfed sugar cane	34
3.8	LUR for rainfed rubber	35
3.9	LUR for rainfed cashew	35
3.10	LUR for rainfed rambutan	36
4.1	Growth rate of population affect to land use from 1998 to 2002	42
4.2	Ethnic groups and religions in Dinhquan	43
4.3	Change of land use types during 1998 to 2003	45
4.4	Classifying existing land use in agriculture	46
4.5	Agricultural land use types in 2003	48
4.6	Economic return for land use types in agriculture	51
4.7	Classification of assessing economic effect	52
4.8	Some key operations for of major LUTs	55
4.9	Relative weights of each factor for irrigated rice-rice	57
4.10	Relative weights of each factor for rainfed LUTs	58
4.11	Membership function of factors	61
4.12	Suitability class for crops	64
4.13	Distribution of physical suitability class for crops	68
4.14	Net benefit cost ratio (NBCR) of selected crops	70

4.15	The economic priority expressed as weights standardized from NBCR	70
4.16	The result of land allocation in the study area	71
4.17	Matched areas between land allocation and existing land use	73
4.18	LUTs selected to replace corn in the scenario I	76
Appendix Table 1	Land statictics of Dinhquan district in 2003	86
Appendix Table 2	Classification of soil type in the study area	88
Appendix Table 3	Distribution of land mapping unit derived from GIS analysis	90
Appendix Table 4	Describing characteristics of LMU	93

LIST OF FIGURES

Figures	Page
2.1 Procedures in land evaluation (FAO, 1984; Dent and Young, 1987)	14
2.2 Two-step method and parallel method in land evaluation (Nguyen, 2000)	17
3.1 The location of Dinhquan district	19
3.2 Slope map of Dinhquan district	21
3.3 Proportion of main soil types in Dinhquan	23
3.4 The soil map of Dinhquan district	26
3.5 Land use map of Dinhquan district in 2003	28
3.6 The framework for land evaluation used in the study	29
3.7 Multi-criteria evaluation procedure	37
3.8 The continuous rating scale	38
3.9 Land allocation for LUTs	40
4.1 Change of agricultural land during 1998-2003	50
4.2 Change of industrial crop area during 1998-2003	50
4.3 Land Mapping Unit map of Dinhquan district	53
4.4 Sigmoidal membership function with monotonically decreasing (a) and monotonically increasing (b)	59
4.5 Linear membership function	60
4.6 The user defined function	60
4.7 The constraint map in the study area	62
4.8 Constraint map of irrigated rice-rice cropping system	63
4.9 Physical suitability for irrigated rice- rice cropping system	65
4.10 Physical suitability for rainfed corn-corn cropping system	65
4.11 Physical suitability for sugar cane	66
4.12 Physical suitability for rubber	66
4.13 Physical suitability for cashew	67

4.14	Physical suitability for rambutan	67
4.15	Land allocation for selected crops in the study area	72
4.16	Target areas for reducing corn production in the study area according to the Scenario I	75
4.17	Target areas for expanding rambutan production in the study area according to the Scenario II	76
4.18	Areas of cashew and rambutan replace for reducing corn areas	77
