### Acknowledgements

This study was supported by the PED Project of the Commission on Higher Education, Ministry of Education, Thailand and partially funded from Postgraduate Scholarship of Graduate School, Chiang Mai University.

I deeply thank my advisors; Associate Professor Suthat Julsrigival, Professor Dr. Chuckree Senthong, Associate Professor Dr. Dumnern Karladee, Associate Professor Dr. Sunsanee Jamjod and Dr. Luechai Arayarungsarit who provided continuous support during the long process of this research and also all comments to improve the accuracy of this thesis.

I also thank the director of Pathumthani Rice Research Center for providing facilities during investigation of field experiments, Mr. Suniyom Taprab for his advice to analyse the experimental data, Mr. Surapong Potipiboon and Mr. Suchart Nakprach who provided me rice germplasm for testing.

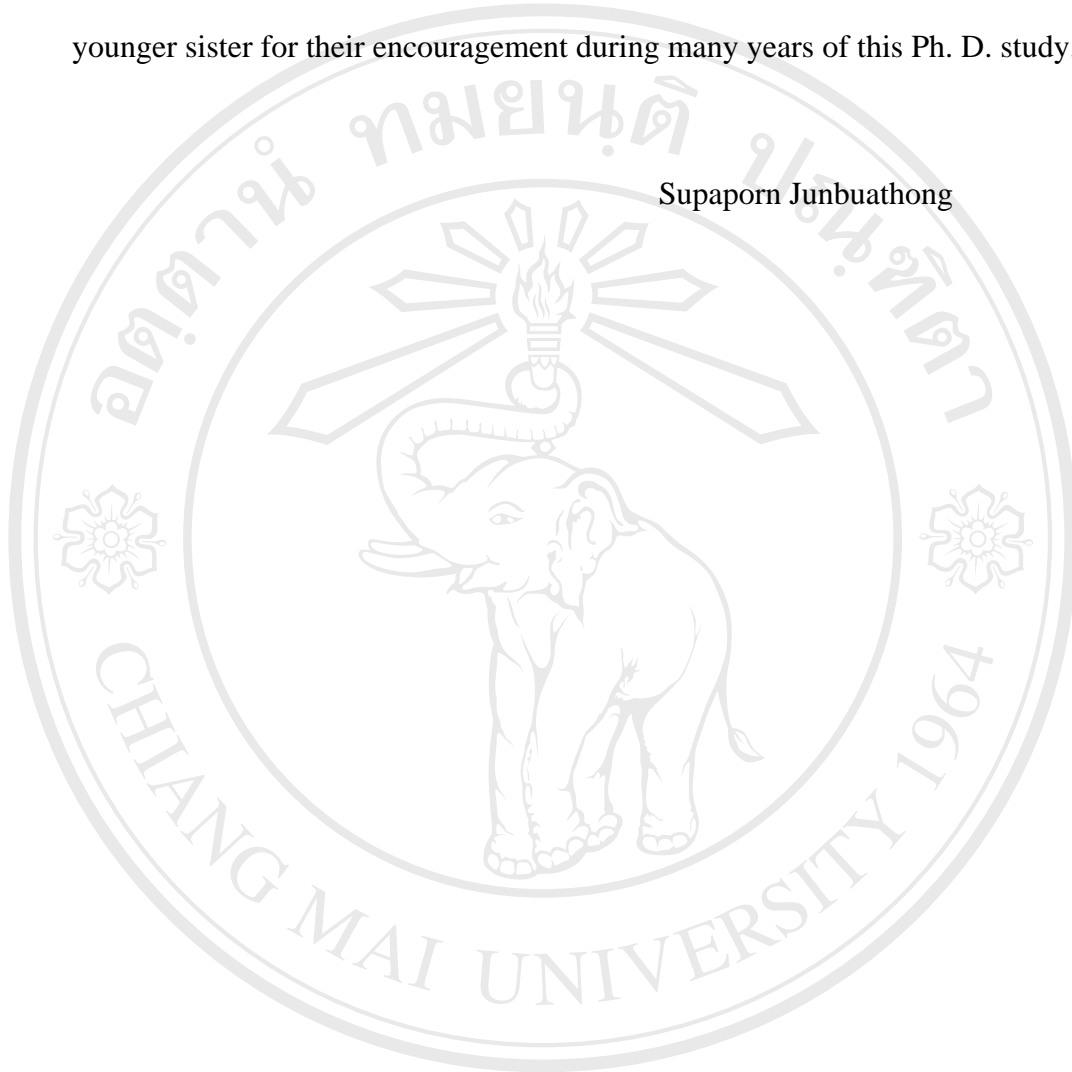

I am thankful to Dr. Kanjana Klakang for testing brown planthopper resistance and Dr. Amornthip Muangprom for her advice and making me comfortable to use an electron microscope.

Thanks are also to the staff of Post Harvest Laboratory at Pathumthani Rice Research Center for their help to analyse physiological and chemical properties of rice grain.

There had been many people whom I consulted in this study and they were very cooperative and helpful: Ms. Jarunee Pilumwong, Ms. Janjira Puntase, Ms. Sarita Yoopum, Ms. Jaruwan Mankong and many others whom are not mentioned here for their help and encouragement.

Finally, I am grateful to my mother, Mr. Komane and Mrs. Somlee Surbvisate for their support in everything and also thanks to my elder brothers, sisters and younger sister for their encouragement during many years of this Ph. D. study.

Supaporn Junbuathong
