

TABLE OF CONTENTS

	Page
Acknowledgements	iii
Abstract in English	iv
Abstract in Thai	vii
List of Tables	xiii
List of Figures	xiv
Chapter 1 Introduction	1
Chapter 2 Literature Review	3
2.1 Irrigation systems in Chiang Mai – Lamphun valley	3
2.2 Approaches for studying water productivity	4
2.2.1 Water accounting approach	4
2.2.2 Water requirement estimation	5
2.2.3 Water and crop yields	8
2.2.4 Water productivity indicator	8
2.3 Spatial tools for water resource management	9
2.3.1 Spatial database design and development	9
2.3.2 Spatial water balance modeling	10
2.3.3 Spatial water productivity	11
2.3.4 Spatial irrigation management	12
2.3.5 Spatial decision support systems	13
Chapter 3 Materials and Methods	15
3.1 Study area	15
3.2 Conceptual framework	16
3.3 Data collection	17

3.4 Data preparation	18
3.4.1 The Boundary of Chiang Mai – Lamphun valley	18
3.4.2 Weekly climatic data	18
3.4.3 Land mapping units	18
3.5 Geodatabase development	19
3.6 Spatial water productivity assessment	19
3.6.1 Spatial water productivity tools	19
3.6.2 Spatial water requirement module	19
3.6.3 Water productivity analysis module	20
3.6.4 Scenario analysis module	20
Chapter 4 Results and Discussion	21
4.1 Chiang Mai – Lamphun valley	21
4.1.1 The system boundary	21
4.1.2 Land use	22
4.1.3 Irrigated areas	23
4.1.4 Climatic zones	25
4.2 Geodatabase development	25
4.2.1 UML class diagram of land mapping units	25
4.2.2 UML class diagram of irrigation project data	27
4.2.3 Water productivity geodatabase	28
4.3 Water productivity tools	29
4.3.1 Framework of water productivity tools	29
4.3.2 Menu bar structure of water productivity tools	30
4.3.3 User interfaces for water productivity tools	31
4.4 Water requirement assessment	38
4.4.1 Water requirement of Mae Taeng irrigation project	38
4.4.2 Water requirement of Mae Feag-Mae Ngad irrigation project	40

4.4.3 Water requirement of Mae Kuang irrigation project	42
4.4.4 Water requirement of Mae Ping Kao irrigation project	43
4.4.5 Water requirement of all irrigation projects	45
4.5 Water productivity assessment	46
4.5.1 Water productivity of Mae Taeng irrigation project	46
4.5.2 Water productivity of Mae Feag-Mae Ngad irrigation project	48
4.5.3 Water productivity of Mae Kuang irrigation project	50
4.5.4 Water productivity of Mae Ping Kao irrigation project	51
4.5.5 Water productivity of all irrigation projects	53
4.5.6 Water productivity of rice cropping system	55
4.5.7 Water productivity of second rice cropping system	56
4.5.8 Water productivity of longan cropping system	58
4.6 Scenario analysis	59
4.6.1 Land use change analysis	59
4.6.2 Water supply and economic factors change analysis	60
Chapter 5 Conclusions and Recommendations	62
References	65
Curriculum Vitae	74

LIST OF TABLES

Table	Page
1 Sources of GIS layers for developing water productivity tools	17
2 Land use distribution by types and seasons in Chiang Mai-Lamphun valley	22
3 Types of irrigation projects and irrigated areas in Chiang Mai-Lamphun valley	24
4 Water requirement of different cropping systems in Mae Taeng irrigation project	40
5 Water requirement of different cropping systems in Mae Feag-Mae Ngad irrigation projects	41
6 Water requirement of different cropping systems in Mae Kuang irrigation project	43
7 Water requirement of different cropping systems in Mae Ping Kao irrigation project	44
8 Water productivity of different cropping systems in Mae Taeng irrigation project	48
9 Water productivity of different cropping systems in Mae Feag-Mae Ngad irrigation project	49
10 Water productivity of different cropping systems in Mae Kuang irrigation project	51
11 Water productivity of different cropping systems in Mae Ping Kao irrigation project	52
12 Water productivity of all irrigation projects	53
13 Water productivity of rice cropping systems in the rainy season	56
14 Water productivity of second rice cropping systems in the dry season	57
15 Water productivity of longan cropping system	58

LIST OF FIGURES

Figure	Page
1 Water-accounting diagram applicable to basin analysis	5
2 Study site in Chiang Mai – Lamphun valley	15
3 The conceptual framework of the study	16
4 Chiang Mai – Lamphun valley and large irrigation project areas	21
5 Land use of Chiang Mai – Lamphun valley	23
6 Irrigation systems in Chiang Mai – Lamphun valley	24
7 Climatic zones in Chiang Mai – Lamphun valley	25
8 Structure of land mapping units in UML class diagram	26
9 Structure of irrigation project in UML class diagram	27
10 Water productivity geodatabase	28
11 Metadata of water productivity geodatabase	29
12 Framework of water productivity tools	30
13 Menu bar structure of water productivity tools	30
14 A window for selecting study area	31
15 A window for selecting irrigation structure and displaying water supply	32
16 A window for displaying land use types and crop calendar	33
17 A window for displaying climatic zone and climatic data	33
18 A window for displaying estimated water requirement	34
19 A window for displaying estimated water productivity	35
20 A window for changing all land use systems	36
21 A window for changing some land use areas	37
22 A window for changing amount of water supply, cost of inputs and output price	38

23	Spatial distribution of water requirement in Mae Taeng irrigation project	39
24	Spatial distribution of water requirement in Mae Feag-Mae Ngad irrigation project	41
25	Spatial distribution of water requirement in Mae Kuang irrigation project	42
26	Spatial distribution of water requirement in Mae Ping Kao irrigation project	44
27	Spatial distribution of yearly water requirement (mm.) in all irrigation projects	45
28	Total amount of irrigation water requirement (Mm ³) for all irrigation projects	46
29	Spatial distribution of water productivity in Mae Taeng irrigation project	47
30	Spatial distribution of water productivity in Mae Feag-Mae Ngad irrigation project	49
31	Spatial distribution of water productivity in Mae Kuang irrigation project	50
32	Spatial distribution of water productivity in Mae Ping Kao irrigation project	52
33	Spatial distribution of yearly water productivity (baht/m ³) in all irrigation projects	53
34	Land use of all irrigation projects	54
35	Spatial distribution of water productivity in rice cropping system	56
36	Spatial distribution of water productivity in second rice cropping system	57
37	Spatial distribution of water productivity in longan cropping system	58
38	Setting parameter for changing land use pattern from rice+onion/garlic to rice+soybean	59
39	Setting parameter to evaluate effects of changing water supply and economic factors on water productivity	60
40	Spatial distribution of zonal water productivity from simulation	61
