Abstract (Thai)	iv
Abstract (English)	vi
Table of Contents	viii
List of Tables	xii
List of Figures	xv
CHAPTER 1 INTRODUCTION	1
1.1 Background	1
1.2 Rationale	2
1.3 Objectives	4
1.4 Usefulness of the study	4
CHAPTER 2 LITERATURE REVIEW	5
2.1 The concept of sustainable agriculture	5
2.2 Livestock and sustainability of agricultural systems	8
2.2.1 Role of livestock	8
2.2.2 Benefit of livestock	9
2.3 Indicators of agricultural sustainability	10
2.3.1 Normalizations of indicators	15
2.3.2 Aggregation of indicators	16

2.4 Assessing sustainability in agriculture 16
2.4.1 Analytical hierarchy process (AHP) 20
2.4.2 Sustainability index analysis (SIA) 22
2.4.3 AMOEBA diagram 23
CHAPTER 3 RESEARCH METHODOLOGY 24
3.1 Conceptual framework 24
3.2 Study area and sampling method 26
3.3 Data collection 27
3.3.1 Primary data collection 27
3.3.2 Secondary data collection 27
3.4 Method of data analysis 28
3.5 Sustainability indicators 28
3.5.1 Ecological suitability 29
3.5.2 Social acceptability 36
3.5.3 Economic viability 37
3.6 Assessing sustainability 39
3.6.1 Indicators assumed to have equal importance 41
3.6.2 Indicators assumed to have un-equal importance 41
3.6.3 AMOEBA diagram 43
CHAPTER 4 CONTEXT OF STUDY AREA 44
4.1 Geographical, topography, and climate condition 44
4.2 Soil and water resource characteristics in Bali province 49
4.3 Social economic conditions in Bali province 52

4.4 *Subak abian* concept and definition 54

4.5 Bali Kintamani coffee 57

CHAPTER 5. CHARACTERIZATION OF INTEGRATED COFFEE-BASED FARMING SYSTEMS 59

5.1 General characteristics of interviewed farmers 59

5.2 Characteristics of coffee-based farming systems 62

5.2.1 Integrated coffee with tangerine and livestock farming systems (CTL) 65

5.2.2 Integrated coffee with clove and livestock farming systems (CCL) 68

5.2.3 Integrated coffee and livestock farming systems (CL) 71

5.3 Overview of arabica coffee cultivation 73

5.3.1 Production aspect 73

5.3.2 Social economic aspect 76

5.3.3 Other aspect 77

5.4 Overview of tangerine cultivation 78

5.5 Overview of clove cultivation 79

5.6 Overview of livestock rearing 80

CHAPTER 6 ASSESSMENT OF SUSTAINABILITY 83

6.1 Sustainability indicators 83

6.1.1 Ecological suitability 84

6.1.1.1 Soil fertility 84

6.1.1.2 Water saving 89

6.1.1.3 Amount of organic input used 93
6.1.2 Social acceptability 94
6.1.2.1 Employment generation 94
6.1.2.2 Farmer awareness of usefulness of intercropping 96
6.1.2.3 Input self sufficiency 98
6.1.3 Economic viability 99
6.1.3.1 Land productivity 99
6.1.3.2 Profitability 100
6.1.3.3 Income stability 101
6.2 Sustainability assessment 102
6.2.1 Indicators assumed having equal weight 103
6.2.2 Overall sustainability by AMOEBA diagram 108
6.2.3 Indicators assumed having un-equal weight 110
6.3 Potential and constraints of integrated coffee-based farming systems 114
CHAPTER 7. CONCLUSIONS AND RECOMMENDATIONS 119
7.1 Conclusions 119
7.2 Recommendations 123
7.3 Limitation of study 125
REFERENCES 127
APPENDICES 135
CURRICULUM VITAE 145

LIST OF TABLES

Table		Page
2.1	Sustainability indicators of two coffee production systems in the highlands of Chiapas, Mexico	13
2.2	The AHP scales for paired comparisons	21
2.3	Average consistencies of random matrices	22
3.1	Unit of measurement of nine indicators of sustainability	29
3.2	Crop coefficient (kc) values for citrus	35
4.1	Soil types in Bali province in 2006	50
5.1	Number of farmers in coffee-based farming systems	59
5.2	Land holding of surveyed farmers in the study area	60
5.3	Age of surveyed farmers in the study area	61
5.4	Education level of surveyed farmers in the study area	61
5.5	Members of household of interviewed farmers in the study area	62
5.6	Number of trees in integrated coffee-based farming systems	64
5.7	Number of livestock in integrated coffee-based farming systems	64
5.8	Cropping calendar of integrated coffee-based farming systems	65
5.9	Marketing place of integrated coffee-tangerine-livestock farming systems	68
5.10	Place of marketing of integrated coffee-clove-livestock

	farming systems	70
5.11	Place of marketing of integrated coffee-livestock farming systems	73
6.1	Average farm gate price of crops (in Rupiah)	85
6.2	Yield of crops in 2002-2007	86
6.3	Value of yield in the period of 2002 – 2007	87
6.4	Cost of soil improvement in the year of 2005-2007 (in Rupiah)	87
6.5	Cost of land use of the coffee-based farming systems (in Rupiah) during 2002 – 2007	88
6.6	The average normalized value of soil fertility indicator	89
6.7	Reference evapotranspiration and rainfall in 2002	91
6.8	Crops coefficient during the irrigation needed	92
6.9	Annual irrigation water used in 2002	93
6.10	Employment generation in integrated coffee-based farming systems	95
6.11	Farmers' perception of usefulness of intercropping	97
6.12	Input self sufficiency of integrated coffee-based farming systems in 2007	98
6.13	Land equivalent ratio of integrated coffee-based farming systems	99
6.14	NPV and IRR of integrated coffee-based farming systems (in Rupiah/ha)	101
6.15	Coefficient of variation (CV) of income of three systems of integrated coffee-based farming systems	102
6.16	Average normalized values of sustainability indicators	104
6.17	Result of AHP workshop for the three aspects of sustainability	111

ลิขสิทธิ์มหาวิทยาลัยเชียงใหม่

All rights reserved

6.18 Result of AHP workshop for indicators of sustainability 111

6.19 Measurement of overall weight of sustainability by AHP 113

6.20 Overall sustainability score by using AHP 113

LIST OF FIGURES

Figure		Page
2.1	Four scales of sustainability indicators	17
3.1	Conceptual framework	24
4.1	The map of Indonesia and Bali province	44
4.2	Land use in Bali province in 2006	45
4.3	The rainfall data in Bali province, 2006 (in mm)	46
4.4	The average annual temperature (in º C) in Bali province in 2006	46
4.5	Proportion of land use in Kintamani sub district in 2006	48
4.6	Soil Map of Bali province in 2006	50
4.7	The population density in Bali province, 2006	53
4.8	The employment in Bali province in 2006	53
4.9	The employment condition in Bangli district in 2006	54
5.1	Pattern of CTL	66
5.2	Traditional plain integration of CTL	67
5.3	Pattern of CCL	69
5.4	Traditional plain integration of IFS-2	70
5.5	Pattern of CL	71
5.6	Traditional plain integration of CL	72
6.1	Sustainability score with SIA	105
6.2	Overall sustainability with AMOEBA	109
6.3	Overall sustainability score by using AHP	114
