ACKNOWLEDGEMENT

I would like to express my sincere gratitude and deep appreciation to the following persons who have made the completion of this dissertation and the attainment of my M.S. (Animal Science) degree possible.

Assoc. Prof. Puntipa Pongpiachan, primary major advisor, for allowing me to discover the value of independent work, thinking and research for her assistance in the experimental studies and her genuine patience and confidence in my abilities during my graduate study.

Dr. Pongsuda Pongtanya and Dr. Wonnop Visessanguan, secondary major advisor, for their guidance, kindness, invaluable advice, supervision, suggestion and constant encouragement throughout the years of the work.

My grateful thanks are to Dr. Lily Eurwilaichitr, external examiner, for her valuable suggestions.

I would like to thank all the staff of the Food Biotechnology Laboratory at the National Center for Genetic Engineering and Biotechnology (BIOTEC), Thailand, for their help and encouragement. They were always nice and friendly.

I thank my friend Mr. Makha Weerajitt for his help in field experiments, proof reading and encouragement during my graduate study.

I am thankful to all lecturers for their assistance, my colleagues at Department of Animal Science, Faculty of Agriculture, Chiang Mai University, Thailand for their support and National Center for Genetic Engineering and Biotechnology, BIOTEC for scholarship and financial support during two years to accomplish my degree.

Lastly, I am most grateful to my family, without whose unfailing help and continuous encouragement, it would not have been possible to complete this thesis.

Patipat Udomsamuthirun
