## ACKNOWLEDGEMENTS

First, I am grateful to my advisor, Asst. Prof. Sakchai Dettrairat. I would like to convey my special thanks to him for his guidance, assistance and encouragement. He taught me how to write academic papers, made me a better researcher, had confidence in me when I doubted myself, and brought out the best ideas in me. Without his encouragement and constant guidance, I could not have finished this dissertation.

Special thanks go to Asst. Prof. Dr. Pranee Leechanachai, who took full responsibility for helping me complete the writing of this dissertation, gave insightful comments and reviewed my work at very short notice.

I would like to thank the rest of my thesis examination committee members, Dr. Virat Klinbuayaem, who posed good questions and conducted interesting discussions.

Thanks also to Prof. Dr. Kovit Pattanapanyasat for training me in the Intracellular Cytokine Staining technique and creating interesting discussions.

I respectfully acknowledge the assistance of Asst. Prof. Warunee Kunachiwa for introducing me to master degree programs, teaching me flow cytometric techniques, helping and encouraging me at all times.

I am also greatly indebted to my past chairman, Lecturer Nuanchuen Kamthon for allowing me to study by writing the statement for my master degree program. Also, thanks to the Blood Bank staff for being subjects, believing in me and encouraging me to write this dissertation.

Let me also say 'thank you' to all staff members of the Division of Clinical Immunology and Division of Clinical Microbiology, Faculty of Associated Medical Sciences, especially Mr. Boonsong Tanjai, for their advice, friendship, co-poration, collection of specimens and data for my dissertation.

I would like to thank the Division of Clinical Immunology and Division of Clinical Microbiology, Faculty of Associated Medical Sciences, for providing instruments and places for study.

I am grateful to all patients and volunteers who donated samples, and graciously gave their time to participate in the study. Without their kindness I could not have finished this dissertation. I would also like to thank Sunpatong Hospital, Chiang Mai province and their staff members who supported this study by supplying the samples

Last, but not least, I thank my family: my parents, for giving me life, for educating me, and for their unconditional support and encouragement.

This work was supported by a research from the AIDS Divisions, Department of Communicable Disease Control, Ministry of Public Health, Thailand.

Prajitr Tanan
