ANALYSIS ON THE SUSTAINABILITY OF A FOREST-TEA
PRODUCTION SYSTEM: A CASE STUDY IN BAN KUI
TUAI, TAMBON PA PAE, AMPHOE MAE TAENG,
CHANGWAT CHIANG MAI

DONATO ROMULO C. DEL CASTILLO

This thesis has been approved to be a partial
fulfillment of the requirements for the
for the degree of
Master of Science (Agriculture)
in Agricultural Systems

Examining Committee:

Lecturer Dr. Songsak Sriboonchitta

Chairman

Assist. Prof. Dr. Uraivan Tan Kim Yong

Member

Lecturer Dr. Soonthorn Khamyong

Member

Lecturer Dr. Methi Ekasingh

Member

October 1990

ACKNOWLEDGMENTS

Numerous people gave encouragement and advice during my graduate program which I cannot adequately acknowledge them all, though I wish I could express appreciation to each and everyone.

The advice, encouragement, guidance and support of Dr. Songsak Sriboonchitta, general adviser and chairman of my thesis committee, have been invaluable throughout my graduate program particularly in the preparation and completion of this study. The assistance and ecological and sociological insights from the other members of my thesis committee, Dr. Uraivan Tan Kim Yong, Dr. Soonthorn Khamyong and Dr. Methi Ekasingh, were gratefully received during the various periods of my thesis research. Without the intellectual stimulation and support of Dr. Uraivan, I would never have been able to face the task of revising the subject matter that is expanding so rapidly in scope. Dr. Methi also provided critical comments on the final draft of the thesis.

The study has benefited greatly from the support of the officials and staff of the United Nations-Thailand Sam Mun Highland Development Project (UN/Thai SMHDP). In particular, I wish to thank Mr. Pakorn Jringsoongnern, director, Mr. Samer Limchoowong, deputy director, Mr. Shaowit Shomgateiceaw, chief of Watershed Development Unit No. 5, Mr. Preecha Chalermtichai, administrative officer and the staff including Khun Apichart, Khun Burng, Khun Aree and Khun Thongdee. I am also extremely grateful to Mr. Pornchai Preechapanya, chief of the Agroforestry Extension

section, who introduced me to the "world" of "miang" which led to the development of this research work, and provided unselfish assistance throughout my field work. These people were always helpful and cooperative and this facilitated the research tasks.

I am greatly indebted to the members of the Resource Management and Development Project (RMDP) of the Faculty of Social Science at Chiang Mai University headed by Dr. Uraivan Tan Kim Yong for providing some baseline data, maps and references. Special thanks go to Khun Busaban, Khun Chumpol, P-Nuey, and Sang who were always helpful and accommodating during my frequent visits at their office. Without the help of Khun Nattaya, my research assistant and interpreter, my fieldwork would not have been possible. She was skillful in bridging the language that was necessary for the success of the fieldwork.

In Ban Kui Tuai, I was greeted with openness and accomodation by the people such as the assistant village headman, Khun Prasert, and his wife, Khun Kanda, Uy Dee and the other villagers who are many to mention. Special appreciation is expressed to these miang farmers who helped the researcher a lot through their sincere valuable responses. I am left deeply gratified by the cooperative spirit, sincere concern, and genuine warmth of these people. I also thank Khun Chalermkiat, the agroforestry extension officer of the village, who assisted in the field survey.

Interaction with SUAN members especially Dr. Percy Sajise, Dr. Terry Rambo, Dr. Kanok Rerkasem, Dr. Jeff Romm, Dr. Nicomedes

Briones, Dr. Manu Seetisarn, and Dr. June Prill-Brett offered intellectual comments and suggestions in the development of my thesis proposal during an international workshop on "Agricultural Sustainability" at Khon Kaen Province in 1989.

I also wish to thank Dean Nakorn Na Lampang of the Faculty of Agriculture, Acharn Phrek Gypmantisiri, associate director of the Multiple Cropping Center (MCC), Dr. Methi Ekasingh, chairman of the Agricultural Systems Program, and all the professors for the knowledge, patience and wisdom I gained from the graduate program. They initiated me into the world of agricultural systems.

My family and I are very grateful for the financial support provided by the Ford Foundation during my studies and research in Chiang Mai, Thailand. Additional funding support for thesis research from the Rockefeller Brothers' Fund through the Southeast Asian Universities Agroecosystems Network (SUAN) is highly appreciated.

Special thanks is extended to the Forest Industry Organization (FIO) main office in Bangkok with particular reference to Mr. Kanit Muangnil, forest economist and chief of the Planning and Statistics Sub-Division under the Southern & Western Timber Work Division, and Montee Phothitai who on short notice were very accomodating, shared insights on the status of fast-growing species in Thailand and allowed me to use their growth data on *Eucalyptus camaldulensis* and *Melia azedarach*.

My heartfelt thanks go to Khun Pramualpis Vesurai, secretary of

the AGS Program, for facilitating the processing of documents and other paperworks, for helping me get acquainted with the new environment; her warm hospitality not only extended to me but to my family, and unfailing support throughout my stay in Chiang Mai.

The administrative staff of the Multiple Cropping Center contributed a great deal over my two-year stay at the center for furnishing my technical needs during my study. I wish to thank Khun Nuancy for her kindness and help in furnishing such needs. I also express my appreciation to the rest of the staff for their assistance.

During the course of the graduate study, there were times not only for academics but also for good times. I owe a great deal to my colleagues in the international Agricultural Systems Program - Class 1988 (Bantau, Kesini, Nara, Sanan, Tita, Wang & Ying), Class 1989 (Anang, Ellen, Johan, Lek, Thongma, Welta, Zhang & Zhong) and Class 1990 (Ashadi, Cheng, De, Ngaew, Panya, Sirichai, Tim & Tony) for their over-all support. It was really worth an unforgettable experience studying and working with an interdisciplinary team composed of these people coming from different countries like China, Indonesia, Philippines, Thailand and Vietnam. Other graduate students from different departments of the Faculty of Agriculture at CMU also contributed to my graduate life to be a memorable one. I would like to thank P-Sap, P-Seri, Kung, On, P-Prosong, Oh, Boonchop, Meow and others who are many to mention for their company. The batches of the AGS program in Thai deserve to be mentioned including P-Tip, P-Molugot, P-Akom and

others.

In addition to the above named persons, there are some special acknowledgments that should be mentioned. Dr. Shalardchai Ramitanondh, a sociologist and anthropologist from the Faculty of Social Science at Chiang Mai University discussed rural development and conservation issues in the highlands of northern Thailand and introduced me to the UN-Thai Sam Mun Highland Development Project because of its thrust on social forestry. Dr. Leo Gonzales, an agricultural economist and research fellow from the International Food Policy and Research Institute (IFPRI), gave valuable comments and suggestions on my thesis proposal. Dr. Kanok Rerkasem shared his stimulating insights on the many definitions of sustainability and updated reading materials related to my study. Acharn Pattanun generously made her time available for the many short discussions on issues in agricultural development and loaned me several books. I also thank the following individuals: Stewart Sawin, a graduate student from University of Victoria, Canada, for discussing his research on fuelwood energy and his idea on modifying a "miang" stove which could save more firewood; Kathy Delate, a doctoral student in agroecology from University of California at Berkeley, and Shawn Morford, from Oregon State University, for their views on current agroforestry systems in the tropics.

Special thanks go to Khun Sirirat, her daughter, Rose, and son, Luth, for their warm hospitality during the early days of my stay in Chiang Mai. My thanks also go to Khun Eh and her family

for providing me a comfortable place to stay during my last year and a half. I am very grateful to the Rujipun family (Khun Mae, P-Gai, P-Nui, P-Gee, P-Nut, Goy, Gor, Tuk & Uy Mon) for making me feel at home during my visits in Chiang Rai.

I am most appreciative of the very great personal encouragement and fun provided during the last phase of the study by my Filipino colleagues - Tita Cayme, Ellen Pantolleana, and Tony Abamo. Learning some Visayan terms from them is worth remembering. During my lengthy data entry, processing and analysis using different software programs, I had to consult the computer experts of MCC from time to time. With this, I owe a great deal to Chanchai and Sirichai for their assistance and patience. I also thank my trusted classmate and roommate, Bantau, for briefing me on the "Do's" and "Don't's" in the Thai society; for the short and long conversations either in Thai or English; and for the good and funny times.

Worthy of particular mention goes to the Filipino community in Chiang Mai when in times of being nostalgic made me feel at home. I am particularly indebted to Manong Diego, Manang Clara and Thelma Elauria, Ate Vicky Naemanahaeminda, Ate Luth Corvanich, Dr. Deomampo and family, and Annie for their warm cordiality and support.

At UPLB, I am extremely grateful to Dr. Adolfo Revilla, Jr., former dean of the College of Forestry and director of the Forestry Development Center (FDC), for granting me the study leave to pursue a M.Sc. in Agricultural Systems at Chiang Mai

University. Likewise, I wish to thank Dr. Virgilio Fernandez, newly-appointed Dean of the College of Forestry, and Dr. Tonie Balangue, newly-designated director of the Forestry Development Center, for allowing the extension of my study leave. I owe much favor to my colleagues at FDC especially in the Forestry of the Future Task Force (Len-len, Leni, Myrna, Sonny, Tony and Bernard) for their moral support and for sparing some of their time to visit me in Chiang Mai during their short official trips to Thailand. A special note of thanks is also addressed to Mr. Zosimo Dimaculangan for facilitating the processing of my study leave and other important matters concerning FDC, and Miss Lizzette Cardenas for her help in sending the reading materials I needed during my coursework, as well as attending to the processing of my papers regarding my status with FDC.

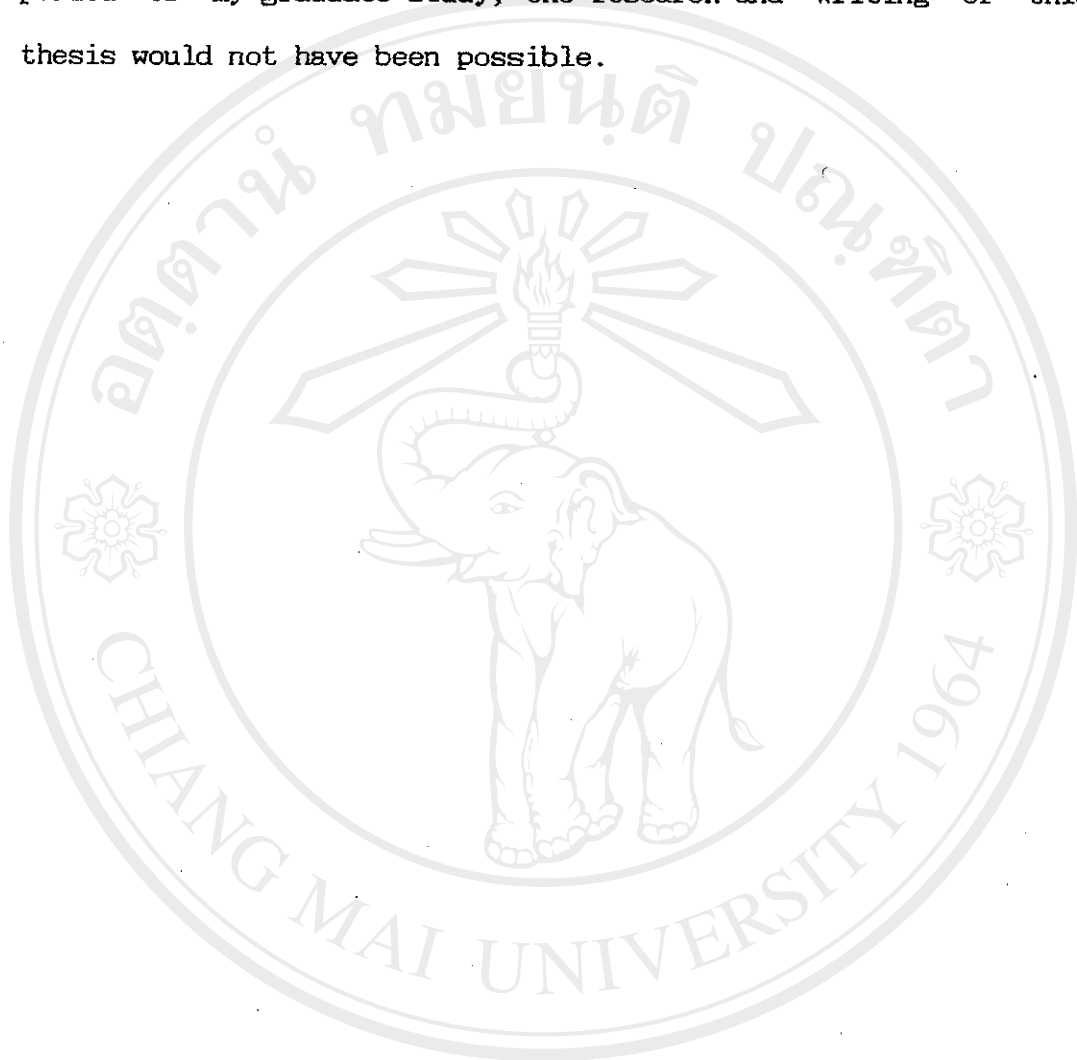

Many friends in many places were very supportive during this undertaking. My thanks are particularly due to Mitch & Helen, Larry & Nenette, Egay, Luz, Mildred, Yecyec, Albert, Mayette, Espie (Los Banos); Edward, Rey, Angie, Leo (Manila), Ric (Canada); Nong, Att, Oh, Gai, P-Mong (Thailand); and many others who are too many to speak of.

To the Cardenas and the del Castillo families, for their love and moral support.

To Goy, for her love, patience and understanding.

And finally, special recognition is due to Dad, Mom, Astro and Margie for all the love, sacrifice, encouragement, constant prayers, help and support they provided during this endeavor.

I extend my deepest gratitude to all individuals and institutions whom without their help and guidance during the period of my graduate study, the research and writing of this thesis would not have been possible.
