Acknowledgement	i
Abstract	ii
Table of Contents	vii
List of Tables	ix
List of Figures	xii
Chapter 1 Introduction	1
Chapter 2 Literature Review	4
2.1 Conservation farming on the steep land	4
2.2 Role and function of alley cropping	6
2.3 Key issues for alley cropping development	10
2.4 Phosphate requirement to sustain high crop yields on upland and highland soils	11
2.5 Farmers' opinion on conservation farming practice	12
Chapter 3 Description of the Study Area	14
Chapter 4 Materials and Methods	18
4.1 Field experiment	18
4.2 Evaluation of short-term benefits	22
4.3 Farmers' assessment of alley cropping	22
Chapter 5 Results and Discussions	23
5.1 The early rainy season peanut experiment	23
5.1.1 Kernel yield and yield components	23
5.1.2 Dry matter yield and nutrient composition	25
5.1.3 Economic assessment of fertilizer effects on peanut crop	27
5.2 The late rainy season soybean experiment	28
5.2.1 Yield and yield components	28
5.2.2 Soybean dry matter yield	30
5.2.3 Nutrient composition	32
5.2.4 Economic consideration of soybean	35
5.2.5 Soybean production in late rainy season on steep land	36

5.3	Hedgerows component	39
5.3.1	Leucaena arrangement	39
5.3.2	Biomass production	40
5.3.3	Nutrient yield	40
5.4	Soil component in experimental area	41
5.4.1	Soil loss prevention	41
5.4.2	Soil moisture distribution	43
5.4.3	Soil nutrient analysis	49
5.5	Labor management	51
5.5.1	Management of farm household labor	51
5.5.2	Return to labor in alley farm	54
5.6	Farmers' opinion on conservation farming practices and prospects of alley cropping system	57
5.6.1	Description of the two alley farmers	57
5.6.2	Farmer landholding and soil fertility problems	62
5.6.3	Incidence of soil erosion and farmer conservation practice	63
5.6.4	Farmers' land use planning	65
5.6.5	Suitability of alley cropping	66
5.6.6	Farmers' adoption of alley cropping	68
5.6.7	Prospects of alley cropping	70
5.7	General Discussion	72
5.7.1	Management of cropping system	72
5.7.2	Key factors for the functioning of farming system	74
5.7.3	Development of alley cropping	75
Chapter 6	Conclusion	76
Chapter 7	References	79
Chapter 8	Appendix	83
	Curriculum Vitae	101

List of Tables

Table	Page
1 Some chemical characteristics of soils on the upland site at Ban Huay Som Sook with 20 to 45 percent slope.	17
2 Levels and issues of study	18
3 Effect of phosphate fertilizer on peanut kernel yield (kg/ha)	23
4 Peanut yield component and shelling percentage as affected by phosphate fertilizer	25
5 Effect of phosphate fertilizer on peanut dry matter yield (kg/ha)	26
6 Effect of phosphate fertilizer on peanut pod yield, nutrient content and nutrient uptake in the alley and the non-alley plots.	27
7 Partial budgeting analysis of phosphate fertilizer on peanut crop in the alley and the non-alley plots.	28
8 Effect of fertilizer on yield and yield components of soybean grown in the alley and the non-alley plots.	30
9 Effect of fertilizers on dry matter yield and plant height of soybean at different stages of growth in the alley and the non-alley plots	31
10 Effect of fertilizers on nutrient content of soybean at different stages of growth in the alley and the non-alley plots.	33
11 Effect of fertilizers on nutrient uptake of soybean seeds in the alley and the non-alley plots	34
12 Partial budgeting analysis of fertilizer treatment on soybean in the alley and the non-alley plots.	36
13 Farmers management of soybean plots on the steep land in late rainy season 1990.	38

14	Soybean yield and yield components in late rainy season (1990) from farmers' field on steep land.	39
15	Soil analysis from the alley and the non-alley plots at soil level 0 - 20 cm.	49
16	Return to labor of the alley and the non-alley farms in different cropping pattern during cropping season from May to December 1990.	56
17	Land use in the village	62
18	Farmers' opinion on soil fertility in their agricultural area	63
19	Farmers' observation on soil erosion in the village	64
20	The degree of soil erosion problem in the village which relate with farmer land use.	64
21	Farmers' opinion on effect of soil erosion	65
22	Farmer land used anticipated	66
23	Numbers of non-alley farmers who ever go to see the alley field	67
24	The future development of alley cropping	69
25	Response of non-adopters to practice alley cropping in the coming year.	70

Appendix

A	Rainfall data in 1990 comparing with the 20 years average rainfall (1971-1990) of Mae Rim district, Chiang Mai	83
C-1	Analysis over site	86
C-2	Combine analysis of variance of peanut kernel yield in the alley and the non-alley plot.	90
C-3	Combine analysis of variance of peanut yield component in the alley and the non-alley plot.	90

C-4	Combine analysis of variance of peanut dry matter yield in the alley and the non-alley plot	91
D-1	ANOVA of soybean yield and yield components in different fertilizer treatment in the alley and the non-alley plot.	92
D-2	ANOVA of soybean dry matter yield and plant height in different fertilizer treatment in the alley and the non-alley plot	92
D-3	ANOVA of nitrogen content in soybean in different fertilizer treatment in the alley and the non-alley plot	93
D-4	ANOVA of phosphorus content in soybean in different fertilizer treatments in the alley and the non-alley plot.	93
D-5	ANOVA of potassium content in soybean in different fertilizer treatments in the alley and the non-alley plot.	94
E-1	Cumulative soil loss (t/ha) at different period during peanut crop in the alley and the non-alley plot	95
E-2	Soil moisture content (% by weight) at soil level 0-10, 10-30, 30-50 cm. soil depth on mulching and non-mulching plot during peanut growing period in the alley and the non-alley field.	96
E-3	Soil moisture content (% by weight) at soil level 0-10, 10-30, 30-50 cm. soil depth on fertilizer and non-fertilizer plot during soybean growing period in the alley and the non-alley.	97
F-1	Production cost of alley and non-alley farm during cropping season from May to December, 1990.	98
F-2	Crop yields and income of alley and non-alley farm during cropping season from May to December, 1990.	99
F-3	Labor used in crop production of alley and non-alley farms during cropping season from May to December, 1990	100

List of figures

Figure	Page
1 Rainfall data in Ban Huay Som Sook and Mae Rim district	14
2 Peanut kernel yield in response to phosphate fertilizer in the alley and non-alley plots.	24
3 Cumulative soil loss (t/ha) during peanut crop in alley field	41
4 Cumulative soil loss (t/ha) during peanut crop in non-alley field.	42
5 Soil moisture content (% by weight) between 0-10 cm.(a), 10-30 cm.(b) and 30-50 cm.(c) soil depth during peanut crop in the alley field	44
6 Soil moisture content (% by weight) between 0-10 cm.(a), 10-30 cm.(b) and 30-50 cm.(c) soil depth during peanut crop in the non-alley field	45
7 Soil moisture content (% by weight) between 0-10 cm.(a), 10-30 cm.(b) and 30-50 cm.(c) soil depth during soybean crop in the alley field	47
8 Soil moisture content (% by weight) between 0-10 cm.(a), 10-30 cm.(b) and 30-50 cm.(c) soil depth during soybean crop in the non-alley field	48
9 Labor intensive farming system of the adopter (The (<i>italic number</i>) means external labor)	53
10 Intercropping of leucaena hedgerows with mixed cropping of fruit trees and field crops.	59
Appendix	
B-1 The lay out of peanut experiment field (split plot design)	84
B-2 The lay out of soybean experiment field (Randomize complete block design)	85
