List of Tables	x
List of Figures	xi
Appendix Tables	xii
Chapter 1 INTRODUCTION	1
Chapter 2 LITERATURE REVIEW	4
2.1 Constraints of upland farming	4
2.2 Some methods for solving upland farming problems	6
2.3. Alley cropping: the potential practice for soil conservation	7
2.4 <i>Tephrosia candida</i> as potential woody leguminous species in alley cropping	11
2.5 Cropping patterns on the upland of the northern mountainous region of Viet Nam	13
Chapter 3 MATERIAL AND METHOD	15
3.1 Field survey	15

3.2	Field experiment	15
3.2.1	Treatments and design	15
3.2.3	Cultural practices	17
3.3	Data collection	18
Chapter 4	RESULTS AND DISCUSSION	20
4.1	Field survey's results	20
4.1.1	Physical characteristics	20
4.1.2	Social and economic characteristics	23
4.1.3	Agricultural production	25
4.1.3.1	Land use	25
4.1.3.2	Cropping system	27
4.1.3.3	Farmers' practices on some main crops	30
4.1.4	Farmers' background on soil conservation	32
4.1.5	Farmers' opinions on alley crop farming	34
4.1.6	Farmers' opinions on cropping pattern in upland farming	34
4.2	Field experiment's results	37
4.2.1	Productivity of crops	37
4.2.1.1	Peanut	37
4.2.1.2	Corn	39
4.2.1.3	Upland rice	42
4.2.1.4	Cassava	43
4.2.1.5	<i>Tephrocia candida</i>	44
4.2.1.6	Total biomass and yields in cropping systems	46

4.2.2	Soil conservation	48
4.2.2.1	Canopy cover in cropping systems	48
4.2.2.2	Soil movement	52
4.2.2.3	Soil nutrient change	55
4.2.2.4	Nutrient budget	56
4.2.3	Economic evaluation	58
Chapter 5	DISCUSSION	60
5.1	Productive capacity of cropping systems	60
5.1.1	Cropping system	60
5.1.2	Alley cropping	63
5.2	Evaluation of soil conservation	65
5.3	Farmers' willingness to adopt different cropping systems	69
5.4	Cropping systems development	71
Chapter 6	CONCLUSIONS	75
	REFERENCES	77
	APPENDIX	81
	CURRICULUM VITA	112

LIST OF TABLES

Table	Page
1 Effects of slope aspects on water run off and soil loss on bare plowed soil	5
2 Nitrogen contribution by various leguminous-woody species interplanted with maize in alley cropping trials at IITA	12
3 Combination of factors in experiment	16
4 General information of socio-economic situation, and land contribution in Bac Thai, Cao Bang and Lang Son provinces	24
5 Production of some main crops in three provinces	26
6 Land use of farmers in three surveyed villages	27
7 Farmers' common practices on main crop production	31
8 Farmers' common practices on main crop production (continued)	32
9 Farmers' background on soil conservation in upland farming	33
10 Farmers' opinions on alley farming	35
11 Farmers' opinions on cropping systems	36
12 Characteristics of peanut in different treatments	37
13 Characteristics of corn in different treatments	40
14 Biomass of corn at different development stages	41
15 Growth duration and biomass of upland rice	43
16 Characteristics of cassava in different treatments	44
17 Biomass and contained nutrients in <i>T. candida</i>	45
18 Productivity of different components in the cropping systems	46
19 Soil movement and nutrient loss through soil loss	52
20 Soil nutrient changes	55
21 Nutrient budget in each treatment	57
22 Economic estimation of different treatments	59

LIST OF FIGURES

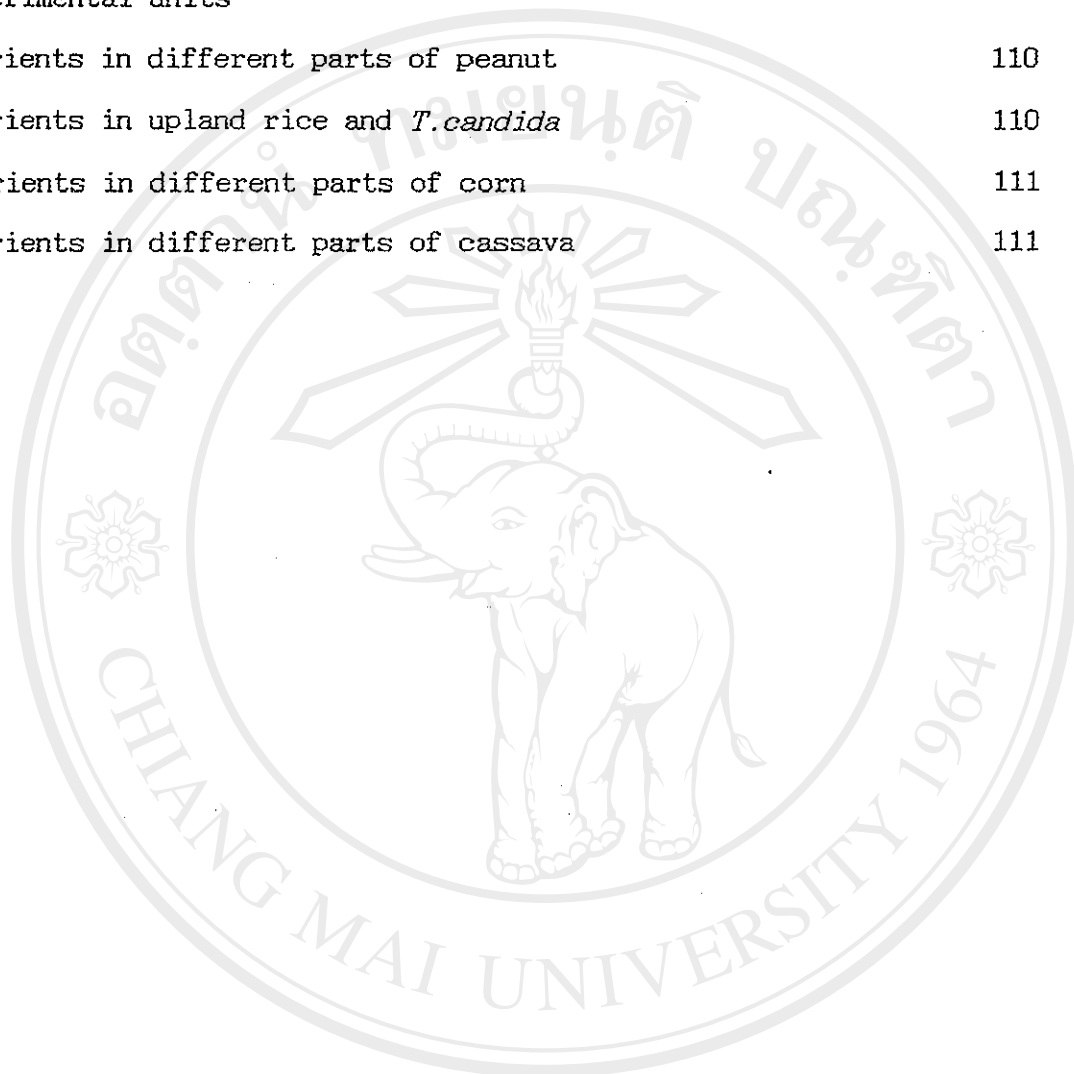

Figure	Page
1 Hypothetical responses surface for changes of soil status with time	9
2 Map of Viet Nam and experimental site	21
3 Climate in Thai Nguyen city of Bac Thai, 1992	22
4a Cropping systems in Bac Thai province	29
4b Cropping systems in Cao Bang and Lang Son province	29
5 Biomass of peanut over time	39
6 Peanut pod and green yield and total biomass	39
7 Percentage of canopy cover and rainfall of 1992 and 1980s at Thai Nguyen city	49
8 Interaction of alley cropping and cropping system factors effects on canopy cover during August	51
9 Total soil loss over the year	53
10 Interaction of alley cropping and cropping system factors effects on soil loss	54
11 Relationship between soil loss and percentage of canopy cover	54
12 Combined effects of productivity, economy, soil conservation, and willingness to adoption of different treatments.	72
Appendix figure	
1 Layout of experiment	81

APPENDIX TABLE

Appendix Table	Page
1 Cropping calendar for different treatments	82
2 Fertilizers and times of application used in the experiment	83
3 Climate in Bac Thai province (1982-1992)	84
4 Climate of Thai Nguyen city in 1982	84
5 Climate of Lang Son province in (1982-1992)	86
6 Climate of Cao Bang province in (1982-1992)	87
7 Biomass of peanut in different development stages	88
8 Biomass of cassava in different development stages	88
9 Various contribution in percentages of crop components in the total biomass	89
10 Covering percentage by crop canopy at various times	89
11 Nutrient concentration in different parts of crop plant	91
12a Nutrient budget in different treatments	92
12b Nutrient budget in different treatments (continued)	93
13a Estimated cost, return and gross margin of the different treatments	94
13b Estimated cost, return and gross margin of the different treatments (continued)	95
14 Combined effects of productivity, economics, soil conservation, and farmers' willing adoptation in different treatments	96
15 ANOVA on peanut biomass	96
16 ANOVA on peanut characteristics	97
17 ANOVA on corn characteristics	97
18 ANOVA on corn biomass	97

19	ANOVA on upland rice biomass over time	98
20	ANOVA on dry weight of parts of cassava	98
21	ANOVA on cassava characteristics	100
22	ANOVA on canopy cover over the time	100
23	ANOVA on soil loss	100
24	ANOVA on some soil properties after experiment	101
25	ANOVA on chemical concentration in different parts of the peanut plant	101
26	ANOVA of chemical concentration in different parts of cassava	102
27	ANOVA of chemical concentration in upland rice straw	102
28	ANOVA of chemical concentration in the parts of corn	103
29	ANOVA of total biomass, yield of cash product, leguminous residues and non-leguminous residues and return	103
30	Biomass, yield and yield component of peanut in different experimental units	104
31	Biomass, yield and yield component of corn in different experimental units (continued)	105
32	Biomass of cassava in different experimental units	105
33	Biomass of cassava in different experimental units (continued)	106
34	Biomass, yield and yield component of cassava in different experimental units	106
35	Biomass of upland rice in different experimental units	106
36	Biomass of <i>T. candida</i> in different experimental units	107
37	Canopy cover percentage in different experimental units at different times	107
38	Cumulative soil loss in different experimental units at different times	108

39	Soil nutrients before experiment were carried out	108
40	Soil nutrients after harvesting crops in different experimental units	109
41	Nutrients in different parts of peanut	110
42	Nutrients in upland rice and <i>T.candida</i>	110
43	Nutrients in different parts of corn	111
44	Nutrients in different parts of cassava	111
