<b>List of Tables</b>	xiv
<b>List of Figures</b>	xv
<b>Chapter 1 Introduction</b>	<b>1</b>
<b>Chapter 2 Literature Review</b>	<b>3</b>
1. Botanical aspect of <i>Hippeastrum</i>	3
2. Growth of <i>Hippeastrum</i>	5
3. Breeding of <i>Hippeastrum</i>	9
4. Plant characterization	11
4.1 Pollen morphology	12
4.2 Dermal tissue	15
4.3 Anatomical characterization	19
4.4 Chromosome investigation	23
5. Floral development of flowerbulbs	30
5.1 Floral initiation and development	30
5.2 Factors affecting floral initiation and differentiation	36
6. Pollen physiology	37
6.1 Pollen viability and germination ability	38
6.2 Pollen storage	41
7. Seed and embryo development	42
7.1 Seeds	43
7.2 Embryo development	44

## LIST OF TABLES

Table		Page
1	Chromosome number of <i>Amaryllis</i> and <i>Hippeastrum</i>	28
2	Abbreviations used for stages of flower initiation and development in bulbs	33
3	Size, polarity, shape, aperture and exine sculpture of diploid and tetraploid pollens	68
4	Stomatal size of diploid and tetraploid varieties	112
5	Stomatal frequency of diploid and tetraploid varieties	113
6	Chromosome number of 3 diploids, 2 tetraploids and 7 hybrids	124
7	Number of bulb scale in bulbs of various size	129
8	Average numbers of aborted floral buds in bulbs of various size	129
9	Number of normal floral buds in bulbs of various size	131
10	Percentages of floral buds inside the bulbs of different size	133
11	Percentages of stainability and germination of pollen grains tested during 6.00-18.00 hr.	171
12	Percentages of stainability, germination and absolute viability of tested pollens	175
13	Germination percentage of the pollens belonging to different varieties stored at room temperature and 5°C	178
14	Average number of days to maturity of pods from various crosses	180
15	Average size of mature pods (length) and seeds (width x length), number of seeds per pod and percentages of seed vitality from various crosses	180
16	Average number of days to different developmental stages of sprouting seeds germinated via various treatments	188
17	Percentages of seed germination and seedling uniformity of hybrid seeds tested in various germinating treatment	191

## LIST OF FIGURES

Figure		Page
1	Flowers of different varieties	48
2	Drawing of a <i>Hippeastrum</i> plant marking the areas of sampling (▲) for epidermal cell investigation	52
3	Polar view under LM of pollen grains of 7 varieties	61
4	Configuration of diploid pollen grains viewed from SEM	62
5	Configuration of tetraploid pollen grains viewed from SEM	63
6	Exine sculpture of diploid pollens grains viewed from SEM	64
7	Exine sculpture of tetraploid pollens grains viewed from SEM	65
8	Configuration of diploid and tetraploid pollen grains viewed from SEM	66
9	Reticulate sculpturing of exine of diploid and tetraploid pollen grains	67
10	Dendrogram showing genetic relationship of diploid and tetraploid pollens	68
11	Leaf transverse sections of SP-Pink sampled from distal (A), median (B) and basal (C) parts	71
12	Leaf transverse sections of SP-Red sampled from distal (A), median (B) and basal (C) parts	73
13	Leaf transverse sections of Apple Blossom sampled from distal (A), median (B) and basal (C) parts	75
14	Leaf transverse sections of Susan sampled from distal (A), median (B) and basal (C) parts	77
15	Leaf transverse sections sampled from distal (A), median (B) and basal (C) parts	79
16	Perianth transverse sections of SP-Pink sampled from distal (A), median (B) and basal (C) parts	81
17	Perianth transverse sections of SP-Red sampled from distal (A), median (B) and basal (C) parts	83

### LIST OF FIGURES (Continued)

Figure		Page
18	Perianth transverse sections of Apple Blossom sampled from distal (A), median (B) and basal (C) parts	85
19	Perianth transverse sections of Susan sampled from distal (A), median (B) and basal (C) parts	87
20	Perianth transverse sections sampled from distal (A), median (B) and basal (C) parts	89
21	Peduncle transverse sections of SP-Pink sampled from distal (A), median (B) and basal (C) parts	91
22	Peduncle transverse sections of SP-Red sampled from distal (A), median (B) and basal (C) parts	93
23	Peduncle transverse sections of Apple Blossom sampled from distal (A), median (B) and basal (C) parts	95
24	Peduncle transverse sections of Susan sampled from distal (A), median (B) and basal (C) parts	97
25	Peduncle transverse sections sampled from distal (A), median (B) and basal (C) parts	99
26	Transverse sections of SP-Pink pedicel	101
27	Transverse sections of SP-Red pedicel	102
28	Transverse sections of Apple Blossom pedicel	103
29	Transverse sections of Susan pedicel	104
30	Transverse sections of pedicel sampled	105
31	Transverse sections of pedicel showing vascular tissue	106
32	Transverse sections of peduncle showing vascular tissue	107
33	Surface views of stomata sampled from leaf (A), perianth (B), peduncle (C) and pedicel (D)	108
34	Top views of epidermal layers of leaf (A), perianth (B), peduncle (C) and pedicel (D) showing shape and size of epidermal cells and stomatal density	109

### LIST OF FIGURES (Continued)

Figure		Page
35	Stomatal frequency viewed from top of epidermal layers sampled from leaf (A), perianth (B) and peduncle (C)	111
36	Dendrogram showing genetic relationships of diploid and tetraploid varieties	112
37	Dividing cells of root-tips sampled at different time of the day	116
38	Chromosomes in root-tip cells pretreated at different length of time	117
39	Chromosomes of root-tip cells stained at different duration	118
40	Images of root-tip tissue dyed with different stain recipe	119
41	Flowers and somatic chromosomes of 3 diploid varieties	120
42	Flowers and somatic chromosomes of 2 tetraploid varieties	121
43	Flowers and somatic chromosomes of 4 hybrids	122
44	Flowers and somatic chromosomes of 3 hybrids	123
45	Bulbs of various grades	126
46	Floral buds appearing in different positions inside a bulb	126
47	Floral buds of different sizes in a single bulb	127
48	Partly dissected bulbs of 18/20 SP-Red (A) and 20/25 Susan (B) showing outermost floral buds	132
49	Flower buds of various size	132
50	Individual inflorescence extracted from 10/12-bulb of SP-Pink (A) and 16/18-bulb of Apple Blossom (B)	134
51	Longitudinal section of the innermost floral bud	136
52	Longitudinal section of a young inflorescence showing the florets at stage G+ and A	137
53	Longitudinal section of 0.4 cm long floret at the G+ stage	138
54	Transverse section of 0.4 cm long floret showing two-lobed anthers	139

**LIST OF FIGURES (Continued)**

<b>Figure</b>		<b>Page</b>
55	Transverse section of 0.4 cm long floret showing three-loculed ovary	139
56	Longitudinal section of 0.6 cm long floret showing pollen mother cells inside the pollen sacs	140
57	Longitudinal section of 0.7 cm long floret showing advancement of anthers and ovary	141
58	Transverse section of 1.7 cm long floret showing anthers with pollen mother cells	142
59	Longitudinal sections of 1.6 cm long floret showing style and stigma	143
60	Longitudinal sections of 1.6 cm long floret showing floral parts	144
61	Longitudinal sections of 2.0 cm long floret showing floral parts	145
62	Transverse section of ovary showing axile placentation of ovules	146
63	Diagrammatic illustration of floral development	147
64	Longitudinal section of 0.3 cm long floret showing stamen at early stage	149
65	Transverse section of 0.5 cm long floret showing microsporangia at primordial stage	149
66	Longitudinal (A) and transverse (B) sections of 0.8 cm long floret showing anther structure	151
67	Longitudinal (A) and transverse (B) sections of 1.2 cm long floret	152
68	Longitudinal sections of anthers detached from 1.3 cm long floret (A) and 1.9 cm long floret (B) showing meiosis in sporogenous cells	153
69	Longitudinal sections of anthers from 2.0 cm long floret (A) and 2.2 cm long floret (B)	154
70	Dividing microspore and binucleate pollen	155

### LIST OF FIGURES (Continued)

Figure		Page
71	Longitudinal sections of anthers containing abortive and viable pollens	155
72	Transverse section of dehisced anther at pre-blooming stage	156
73	Anthers at different dehiscent stage	156
74	Fresh pollens seen under LM	157
75	Diagrammatic illustration of developmental microsporogenesis	158
76	Longitudinal sections of 0.6 cm long floret (A) and transverse Section of 0.4 cm long floret (B) showing ovule primordium	160
77	Transverse section of 1.5 cm long floret showing anatropous ovule	161
78	Longitudinal section of 1.5 cm long floret showing ovule primordium	161
79	Transverse sections of 1.5 cm long floret showing ovule primordium	162
80	Longitudinal sections of 1.6 cm long floret showing young ovule	162
81	Longitudinal (A) and transverse (B) sections of 1.8 cm long floret showing young ovule	163
82	Longitudinal sections of 2.1 cm long floret showing developing ovule	164
83	Longitudinal (A) and transverse (B) sections of ovary on 3 <sup>rd</sup> day of blooming	165
84	Transverse sections of ovary on 6 <sup>th</sup> (A) and 9 <sup>th</sup> (B) day of blooming	166
85	Diagrammatic illustration of ovule development	167
86	Fresh pollen grains of different varieties stained in aceto-carmin solution	170
87	Fresh pollen grains of different varieties seen under LM	172
88	Germination pollens from cultures seen under LM	173
89	Progressive germination percentages of pollen grains tested at different hours	174

### LIST OF FIGURES (Continued)

Figure		Page
90	Percentages of stainability and germination of tested pollens	174
91	Features of pods (A and B) and mature seeds (C)	181
92	Longitudinal sections of ovary on the 5 <sup>th</sup> day after pollination	183
93	Longitudinal sections of ovary on the 10 <sup>th</sup> day after pollination	184
94	Mature seed seen under LM	185
95	Longitudinal sections of mature seed showing embryo	186
96	Hybrid seeds germinating in different treatments	187
97	Diagrammatic illustration of germinating seeds in water	189
98	Seedlings from various germinating treatments	190
