Abstract in English	iii
Abstract in Thai	vi
Table of contents	ix
List of table	xiii
List of figure	xv
CHAPTER 1 INTRODUCTION	1
CHAPTER 2 LITERATURE REVIEW	6
2.1 Role of legumes in Asia	6
2.1.1 Food legumes	6
2.1.2 Soil fertility improvement and disease control	7
2.1.3 Diversified roles in cropping systems	8
2.2 The limitations	9
2.3 Mungbean production	10
2.3.1 Mungbean production in the South and South East Asia	10
2.3.2 Mungbean production in Vietnam and Thua Thien Hue	11
2.4 Response of legumes to phosphorous fertilizer application	12
2.4.1 Soil and its limitation	12
2.4.2 Role of phosphorous in plant growth	13
2.4.3 Response of legumes to phosphorous fertilizer application	13
2.4.4 Response of mungbean to phosphorous fertilizer	15

CHAPTER 3 MATERIALS AND METHODS	17
3.1 Field survey	17
3.2 Field Experiment	18
3.2.1 Material and experimental site	18
3.2.2 Sampling procedures and data collection	19
3.2.2.1 Soil samples	19
3.2.2.2 Plant samples	19
3.2.3 Chemical analysis	20
3.2.4 Economical analysis	21
CHAPTER 4 RESULTS AND DISCUSSION OF FIELD SURVEY	22
4.1 Study site	22
4.2 Soil type and soil characteristics	22
4.3 Climatic conditions	25
4.4 Land use	28
4.5 Mungbean in cropping systems	30
4.6 Mungbean practices	35
CHAPTER 5 RESULTS OF EXPERIMENT	37
5.1 Effects of liming and phosphorous fertilizer application	
on available phosphorous, exchangeable Al³⁺ and soil pH	
37	
5.2 Effects of liming and phosphorous fertilizer application	
on available phosphorous, exchangeable Al³⁺ and soil pH	
39	
5.2.1 Above ground dry matter	39

5.2.2 Root dry weight	41
5.3 Response of number of nodule to phosphorous fertilizer	44
5.4 Response of plant height to phosphorous fertilizer application	47
5.5 Response of yields and yield components to phosphorous fertilizer application rates	49
5.5.1 Number of pod per plant	49
5.5.2 Number of seed per pod	50
5.5.3 100-seed weight	51
5.5.4 Response of seed yield to phosphorous fertilizer	52
5.6 Response of N, P, K content in the youngest fully expanded leave (YFEL) of mungbean to phosphorous fertilizer application rates	53
5.7 Economic consideration	55
CHAPTER 6 DISCUSSION OF EXPERIMENT	58
6.1 Effect of phosphorous fertilizer on exchangeable Al^{3+} , available phosphorous and soil pH	58
6.2 Response of mungbean growth, yield, and yield components to phosphorous fertilizer	59
6.2.1 Plant height	59
6.2.2 Nodulation	60
6.2.3 Dry matter	61
6.2.4 Yield components	62
6.2.5 Seed yield	62

6.2.6 Potassium, nitrogen and phosphorous concentration of YFEL in V4	63
6.3 Economic consideration	65
CHAPTER 7 CONCLUSION AND RECOMMENDATION	67
7.1 Conclusions	67
7.2 Recommendations	68
REFERENCE	69
APPENDIX	77
CURRICULUM VITAE	107

LIST OF TABLE

Table 1. Some main soil types in Thua Thien Hue province	23
Table 2. Some main characteristics on Yellow-Red Ferralitic Soils	24
Table 3. Some chemical characteristics of mungbean soil	24
Table 4. Sown area of some main crops in Huong Tra district	29
Table 5. Average yield, mungbean area and total annual crop area of household in Binh Dien and Huong Ho	32
Table 6. Yield ranges of mungbean in Huong Ho and Binh Dien	33
Table 7. Role of mungbean in farming systems in the two communes interviewed	34
Table 8. Mungbean practices from farmers in Huong Ho and Binh Dien	36
Table 9. Average fertilizers applied in mungbean fields in both villages	36
Table 10. Chemical characteristics of soil in experimental site, Huong Ho, 1998	37
Table 11. Analysis of variance of above ground dry matter	40
Table 12. Effect of phosphorous fertilizer on average above ground dry matter by phosphorus fertilizer in V4, R4 and R6	40
Table 13. Average above ground dry matter by variety in V4, R4 and R6	41

Table 14. Analysis of variance of root dry weight	41
Table 15. Effect of phosphorous fertilizer on average root dry weight in three stages of mungbean growth	42
Table 16. Average root dry weight by variety in V4, R4 and R6	44
Table 17. Analysis of variance of number of nodule in V4 and R4	44
Table 18. Analysis of variance of plant height of mungbean at three stages of growth	47
Table 19. Analysis of variance of seed yield, number pod per plant, number seed per pod and 100-seed weight	49
Table 20. Analysis of variance of nitrogen, potassium and phosphorous Concentration in the youngest fully expended leaves (YFEL) at vegetative stage, V4	54
Table 21. Response of average concentration of phosphorous of YFEL to phosphorous fertilizer at V4	54
Table 22. Response of average concentration of potassium of YFEL to phosphorous fertilizer at V4	55
Table 23. Average gross margin comparison among different treatments	55
Table 24. Economic consideration for different treatments	57

LIST OF FIGURE

Figure 1 The study site, Thua Thien Hue province	2
Figure 4.1 Rainfall and temperature of Thua Thien Hue for 14 years (84-97)	26
Figure 4.2 Temperature, rainfall, and evaporation of Thua Thien Hue, 1998	27
Figure 4.3 Sunshine hour and air humidity of Thua Thien Hue, 1998	27
Figure 4.4 Grown area of some main rainfed crops over years in Huong Tra Distict	29
Figure 4.5 Some main cropping patterns in the two villages surveyed	31
Figure 5.1 Changes of available P, pH, and exchangeable Al ³⁺ in the experimental soil after liming and applying phosphorous fertilizer	39
Figure 5.2 Response of the root dry weight to phosphorous fertilizer application rates at V4, R4 and R6	43
Figure 5.3 Response of number of nodule. of different mungbean varieties to phosphorous fertilizer application rates in V4 and R4	46
Figure 5.4 Response of plant heights of different mungbean varieties to P fertilizer Application rates in V4, R4 and R6	48
Figure 5.5 Response of number pod per plant of different mungbean varieties to P fertilizer application rates	50

Figure 5.6 Number of seed per pod in response to phosphorous fertilizer application rates	51
Figure 5.7 Response of 100-seed weight of different mungbean varieties to phosphorous fertilizer application rates	52
Figure 5.8 Response of seed yield of different mungbean varieties to phosphorous fertilizer application rates	53
Figure 5.9 Response of nitrogen concentration in YFEL to different phosphorous fertilizer application rates	54
Figure 5.10 Relationship between gross margin and different phosphorous fertilizer application levels	56
