ACKNOWLEDGEMENT

The author wishes to express his gratitude and deepest appreciation to Associate Professor Puntipa Pongpiachan, thesis advisor, and Associate Professor Petai Pongpiachan, co-advisor, for their excellent guidance, valuable advice, and kindest encouragement throughout this study. This thesis would not have been accomplished without their help.

The author would like to express thank for Associate Professor Doctor Dumnern Karladee, Department of Agronomy, Faculty of Agriculture, for his suggestion help.

The author felt indebt and appreciated to the kindness of Associate Professor Doctor Sarote Khajarern, Department of Animal science, Faculty of Agriculture, Khon Kaen University, for being external examiner.

The author has received a scholarship for master degree study from the Subproject: Graduate Study and Research in Agricultural Biotechnology, Faculty of Agriculture, Chiang Mai University. Most of the chemicals and equipments used in this study were financially supported by this subproject. The author would like to express sincere thanks for the invaluable supported.

The author would like to external the special thank to Mr. Tianchai Unbaan, Miss Orapun Chantarangsri, Miss Surutwadee Pak-u-thai, Mr. Wiwat Pattanawong, Miss Ratchaneewan Knejornwong, Mr. Werachai Tera-arusiri and Miss Wirongrong Kongkaew for their help in the central laboratory.

Finally, I would like to express my gratitude to my family, especially my parents for their unfailing support throughout my study.

Tawatchai Teltathum
