ACKNOWLEDGEMENTS

The SFB 564 “Research for Sustainable Land Use and Rural Development in Mountainous Regions of Southeast Asia” known as “The Uplands Program” in the partner countries, is a long-term collaborative research program. In the Uplands Program nine universities and research institutes from Thailand, Vietnam and Germany are working together with partners in northern Thailand and northern Vietnam. The Uplands Program combines 17 subprojects with 12 disciplines involved ranging from soil, plant and animal sciences to economics and sociology. The project funded by the Deutsche Forschungsgemeinschaft, Germany (DFG) and co-funded by the National Research council of Thailand (NRCT) and Ministry of Science, Technology and Environment (MOST), Vietnam.

Overall goal of The Uplands Program is to make a scientific contribution of the preservation of natural resources and the improvement of living conditions of rural populations in the mountainous regions of Southeast Asia. Scientific work in this context urgently needs to address the two closely related fields of sustainable land use and sustainable rural development. A scientific base needs to be created for the following objectives:

- A. Development and testing of sustainable production and land use systems with increased productivity in ecologically fragile and economically disadvantaged mountainous regions in Southeast Asia
- B. Development of concepts for rural institutions that can contribute to a sustainable reduction of rural poverty, food insecurity and to an improvement for livelihoods in mountainous regions in Southeast Asia
- C. Advancing methods for analyzing complex ecosystems and their interactions with the socio-cultural, economic and institutional environment

Partner Organizations in Thailand

For subproject E2.2 is one of them which as the extension of the harvesting periods of mangoes, litchis and longans based on innovative off-season techniques in crop management could be of great economic benefit for highland farmers and local fruit processing industries, the whole food chain from fruit production through processing to marketing has been studied in an interdisciplinary approach aimed at off-season fruit production and adjusted utilization strategies for these fruits. In the light of sustainable food production, the present objectives are to ensure ecologically compatible fruit production and closed loop management of the raw material in fruit processing. Focus is on quality and food safety of off-season fruits for domestic and international markets. On the basis of the previous characterization of local cultivars and technological developments in processing fruits into products of high nutritive value, research is directed towards the reduction of biological waste volumes by processing raw material into high-quality main and by-products, especially pectin as gelling and stabilizing agents or bioactive fiber.

Only solitary person never does the entirely research complete. Moreover, I would like to express my sincere gratitude and appreciation to the following persons and organization that assisted essentially towards the success of this thesis.

I am very indebted to Prof. Dr. rer. nat. habil. Reinhold Carle for giving me the chance to practice my research under “Research for Sustainable Land Use and Rural Development in Mountainous Regions of Southeast Asia”, namely, “The Uplands Program” in section Subproject E2.2 (Fruit processing technology), my research abroad would not have been possible without his assist and supervise.

I am deeply grateful to Dr. rer. nat. Sybille Neidhart for her support, excellent advice and guidance as well as her encouragement throughout my study period, also for all her help.

Deutsche Forschungsgemeinschaft (DFG) Bonn, Germany: Project number SFB 564-E2.2 (Sonderforschungsverein 564-subproject E2.2) University of Hohenheim, Stuttgart, Germany, and NRCT (National Research Council of Thailand) are gratefully acknowledged for the financial support and for providing me with the chance to make a research abroad.

Thank is also forward to Central Laboratory, Faculty of Agricultural, Chiang Mai University for the facilities, equipments and also the staff for kindly advise throughout my study. Section of Plant Foodstuff Technology, Faculty of Natural Sciences at the University of Hohenheim, providing and supporting the instruments during study period, such as GC-MS.

Mea Jo University, for allowing me to conduct the experiments on their mango trees. Higher appreciation to Assist. Prof. Pawin Manochai for his help and cooperation.

My deepest and sincere thankfulness to Assoc. Prof. Dr. Pittaya Sruamsiri for supervisor of this study, his valuable ideas, advise very guidance, discussions, and cooperation in every aspect throughout the study period while executing the experiments.

My sincere thanks to Assist. Prof. Dr. Daruni Naphrom and Lect. Dr. Weenun Bundithya for dedicating as co-supervisor of this work and her supportive commentary.

Martin Leitenberger, who made a great effort to help me with launching the experiments, also to assist development and optimization of SPME fiber condition such as adsorption, desorption and clean up time. Including the repair and take care a GC-MS machine.

Kathrin Reintjes, Master student at University of Hohenheim. Her thesis is one part of this work: stability of paclobutrazol in soil under sterile condition, Limit of detection of paclobutrazol in soil, the residues of paclobutrazol in real soil and mango.

Berit Jöns, assistance in Subproject E2.2 at University of Hohenheim. For her great collaboration throughout the one and a half year to develop method for determine paclobutrazol in mango, soil, and also the encouragement of all cases.

Marcus Nagel and Wolfram Spreer, who made for dedicating a significant amount of time as the correcting grammar and proof reading of the English manuscript.

I wish to thank all colleagues and staff members in every where for their helpful me a lot during laboratory analysis of the samples: W. Spreer, F. Kugler, S. Roygrong, C. Choocharean, P. Chaichana, W. Pongjanta, T. Jeena, N. Sinphurmsukskul, S. Wicharack, P. Tiyayon, C. Yotpranan, W. Saepueng, S. Pengkham, U. Schuler, D. Euler, P. Nuthiyom, S. Kokanot, W. Pulltha, K. Sreechun, M. J. Shulte, G. Kahl, A. Ditbunjoung, K. Srichun, S. Pinmanee, Y. Sriphan, Noom, Jom.

There are some I would like to thank: S. Sommano, S. Kanjina, B. Mahayothee, S. Phupaichitkun and K. Srichun for reading, correcting grammar and

advice of the thesis, outstanding comments on my work and also for all their helpful assistance.

I feel a deep sense of gratitude to my parents, my girl friend, brother and sister for their tremendous love, supporting and understanding in everything, also a great encourages in difficult times.
