## ACKNOWLEDGEMENTS

I would like to thank the Royal Golden Jubilee (RGJ) Ph.D. program of Thailand Research Fund (TRF) and Chiang Mai University for providing me a research scholarship. In some part of this research is also supported by the Georgia Peanut Commission, the National Peanut Board, and the U.S. Department of Energy, Office of Science, grant No. DE-FG0206ER64321.

First, I am most grateful to my advisor Prof. Dr. Chuckree Senthong who gave me the opportunity of a lifetime to making it possible to start on this Ph. D. program. His confidence enables a large degree of freedom and facilitates own thoughts and ideas and his realization.

I express many thanks to my supervisor committee members; Assoc.Prof. Suthat Julsrigival, Assoc.Prof. Dr. Dumnen Karladee, and Asst.Prof. Dr. Sawit Meechoui for their valuable guidance and helpful criticism in the preparation and completion of this study.

It is a pleasure to thank my co-advisor Prof. Dr. Monique Y. Leclerc, Laboratory for Environmental Physics, the University of Georgia, Griffin campus whose encouragement, supervision and support from the preliminary to the concluding level enabled me to develop an understanding of the subject and made this thesis possible. Many thanks for providing me the opportunity to work in her

motivating group. Her supported me in my activities and let me participate in several workshops and conferences and enable my stay at the University of Georgia.

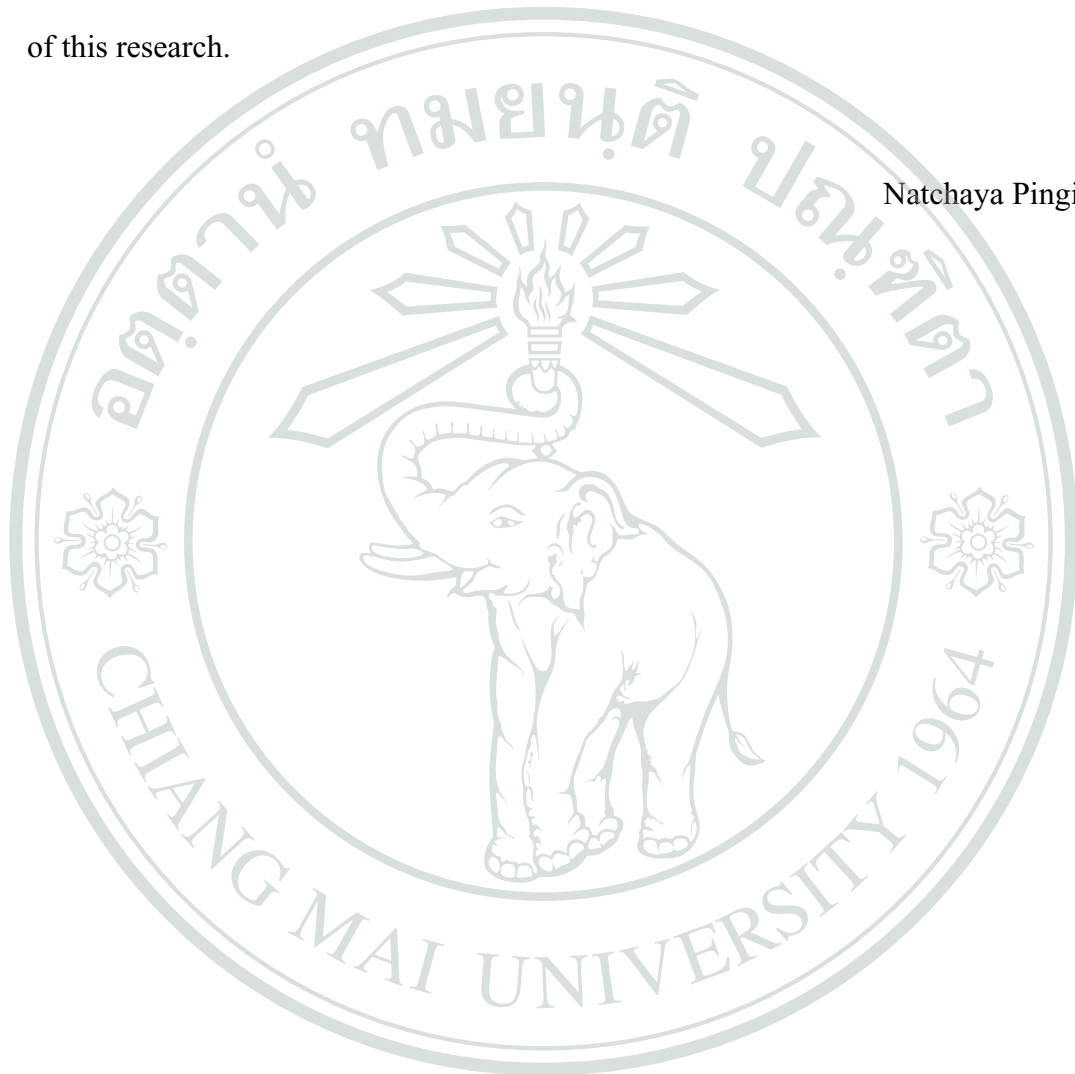

I acknowledge greatly help and encouragement from the staff and students of the Laboratory for Environmental Physics, the University of Georgia, Griffin campus during my research work. I owe gratitude to Dr. Gengsheng Zhang and Dr. Anandakumar Karipot, for their help in my familiarizing the eddy-covariance measurement sensors and their many valuable suggestions and advices during the experiment periods. I am heartily thankful to Prof. Dr. Nelson Luis Dias and Dr. Jinkyu Hong, for providing some useful ideas and insights to deepen my understanding of micrometeorology. I appreciate to thank David Durden, Chompunut Chayawat, and Henrique F. Duarte, with whom I have the good change of discussing and clarify some problem related to the field measurements. Thanks for sharing the cave office with me and confronting with the ups and downs during my Ph. D. program.

Special thanks to Prof. Dr. John P. Beasley and Dr. Diane Lowland, who given generously of their time, kindness, and suggestion of this work.

I wish to express my appreciation to LI-COR Inc. and Vaisala Inc., for multi-faceted support. I would like to thank Mr. Bill Miller and Mr. Rod Madsen from LI-COR Inc. and Ms. Penny Hickey from Vaisala Inc. for their kind help and many recommendations regarding the operation of the devices. I sincerely acknowledge to the staff of the Southwest Georgia Research and Education Center of the University of Georgia near Plains and Cross's family for their patient and sustained logistical support in conducting this research on the premises.

Finally, I am indebted to my parents, my brother, my grandmother, my friends and Durden's family, who encourage, support, and accompany me through to the end of this research.

Natchaya Pingintha
