*To my Parents and Sisters,
who have been a constant source of support;
who taught me to seek answers to any questions;
who encouraged me to pursue
my dreams no matter where they lead.*

*Cho ba mẹ và các em,
đã ủng hộ và cổ vũ không mệt mỏi
đã dạy tôi cách tìm câu trả lời cho mọi câu hỏi
đã khuyến khích tôi theo đuổi
những giấc mơ và những khát khao...*

It is difficult to know even where to begin thanking people for their help during this thesis process. Officially, this is an individual effort; however, the work done for this thesis could in no way have been accomplished without the help of many people. I am grateful to friends and fellow students, who put up with me during this work, and colleagues, whose guidance, insights and critiques were invaluable. There are many people with whom I have spoken since initiating work on this project and every one of those people was significant in the completion of this thesis. Nevertheless there are certain people who deserve special acknowledgment for their input.

I am deeply indebted to the Faculty of Architecture, Chiang Mai University (FACMU), in particular the Graduate Program, for its generous financial support during my studies, which made this thesis at all possible. Thank you also to the people of Thailand for their generosity to the neighbouring countries of Indochina and for helping spread knowledge through their generous scholarship programs.

Before the work even began though, there were those who inspired me to pursue certain paths of research. Key among these people was, Ajarn Dr. Sombat THIRATRAKOOLCHAI sparked my interest in the power of design theory and the potential of Feng Shui in addressing environmental issues of architectural landscape

design. I am grateful to Ajarn Dr. Thiratrakoolchai for his guidance and for his insistence on only the highest levels of work.

I would like to sincerely thank my graduate committee. Ajarn Dr. Apichoke LEKAGUL, Ajarn Dr. Ekkachai MAHAEK and Ajarn Dr. Sethapong SETHABOUPPHA. They provided me with outstanding guidance and critiques while allowing me to drive the direction of this research. Ajarn Dr. Paisarn TEPWONGSIRIRAT was one of a very small number of people outside of the faculty who showed enthusiasm in this thesis from the very beginning and maintained that enthusiasm through to the final defence. Early on I knew that Ajarn Dr. Lekagul's ability to offer constructive criticism would be invaluable to the outcome of this work and although we met only occasionally to discuss the work, each of those meetings was indeed a critical point of departure.

The professional relationship forged with Ajarn Dr. Sant SUWATCHARAPINUN over the last year was, without a doubt, one of the strongest forces behind this thesis. He has been both a strong advocate and an even stronger antagonist. Without the challenges which Ajarn Dr. Suwatcharapinun continually placed within my reach, this thesis would never have developed the critical rigour which I feel has ultimately been accomplished.

I would be remiss for not thanking my friends and colleagues in Chiang Mai, who are as grateful as I for the successful completion of this thesis. So in no particular order, to Panita SAJUSAWAT and her family, Pat SRIARON, Chada ROMCAI, Manissaward JINTAPITAK, Adul HERANYA, Bannarith KHATTIGNARATH, Pakasit PHONEKEO, and Nattikarn KHAMMUNE – the secretary of the Graduate Office; for everyone else, Thank You – for everything.

Thanks to the Faculty of Architecture, Chiang Mai University for having great technological resources and such excellent software and to the faculty IT staff who catered to all my unique requirements and indulgences. Their zealous help to the graduated students is commendable. A tip of the hat, to Google.com for having indexed the known universe; to Skype.com and GizmoProject.com for their

communications technologies; Tim Berners-Lee, the inventor of the InterNet browser; Oxford University for its dictionaries.

Special thanks are due to Dr. LE Manh Thanh, Master NGUYEN Duc Quang and Dr TRAN Ba Tinh at College of Sciences, Hué, Viet Nam for their wisdom, care, and continued inspiration in my academic career. To my parents, my deepest gratitude for their unconditional love, the high standards they demanded for my academic career and during my early education, also, to both my sisters for their support and understanding.

Finally, if it were not for the help of one individual, whom I have never met in person, Jon HEWSON, the writing in this thesis would certainly be much less refined. I will always be grateful to him for making the nuances of the English language so vivid, so easy to comprehend, who has been both a source of constant moral and emotional support and an editor without whom this thesis would definitely have required a significant amount of revision and would not have been completed so expeditiously. He also developed the thesis template that eased the formatting of this work.
