ACKNOWLEDGEMENTS	iii
ABSTRACT	v
LIST OF TABLES	xi
LIST OF ILLUSTRATIONS	xiv
CHAPTER I INTRODUCTION	1
Principles, theory, rationale and hypothesis	1
Purposes of the study	3
Anticipated Benefits	4
Scope of this study	4
Glossary of terms	5
CHAPTER II LITERATURE REVIEW	6
Orthodontic elastomeric chains	6
Force and tooth movement	15
Basis of synthetic polymers	19
CHAPTER III MATERIALS AND METHODS	30
Materials	30
Methods	39
Statistical analyses	45
CHAPTER IV RESULTS	47
Part I: Elastic limit of orthodontic elastomeric chains	49
Part II: Force decay of orthodontic elastomeric chains in the simulated tooth movement condition	61

	Page
CHAPTER V DISCUSSION	76
Part I: Elastic limit of orthodontic elastomeric chains	77
Part II: Force decay of orthodontic elastomeric chains in the simulated tooth movement condition	82
Error of this investigation	88
Limitations of this investigation	89
Suggestions for further study	89
CHAPTER VI CONCLUSION	90
REFERENCES	92
APPENDIX	96
CURRICULUM VITAE	98

LIST OF TABLES

Table	Page
1.1 The condition in tension testing of orthodontic elastomeric chains	4
2.1 Optimum force for tooth movement	17
3.1 The original chain length distribution of six groups of orthodontic elastomeric chains	40
3.2 The original gage length and the crosshead speed in tension test	41
4.1 Means and standard deviations of original chain length, force, displacement and percent elongation at elastic limit of six groups of orthodontic elastomeric chains	57
4.2 Two-way ANOVA of generated force and percent elongation at elastic limit of six groups of orthodontic elastomeric chains	58
4.3 Multiple comparisons of generated force at elastic limit of six groups of orthodontic elastomeric chains by Duncan's multiple range test	59
4.4 Multiple comparisons of percent elongation at elastic limit of six groups of orthodontic elastomeric chains by Duncan's multiple range test	60
4.5 Means and standard deviations of extended length, force, displacement and percent elongation of three forms of elastomeric chains in eight periods during six weeks	62
4.6 Means and standard deviations of remaining force and percent remaining force in eight periods	63

Table	Page
4.7 One-way ANOVA and multiple comparisons of percent remaining force among three forms of orthodontic elastomeric chains in seven periods by Duncan's multiple range test	65
4.8 One-way ANOVA with repeated one factor of percent remaining force among eight periods of three forms of orthodontic elastomeric chains	65
4.9 Multiple comparisons of percent remaining force among eight periods of closed elastomeric chains by Duncan's multiple range test	66
4.10 Multiple comparisons of percent remaining force among eight periods of open elastomeric chains by Duncan's multiple range test	66
4.11 Multiple comparisons of percent remaining force among eight periods of wide elastomeric chains by Duncan's multiple range test	67
4.12 Means and standard deviations of force decay and percent force decay from time to time in seven time intervals during six weeks	68
4.13 Means and standard deviations of force decay rate and percent force decay rate from time to time in seven time intervals during six weeks	69
4.14 One-way ANOVA and multiple comparisons of percent force decay rate among three forms of elastomeric chains in seven time intervals by Duncan's multiple range test	72
4.15 One-way ANOVA with repeated one factor of percent force decay rate among seven time intervals of three forms of orthodontic elastomeric chains	73

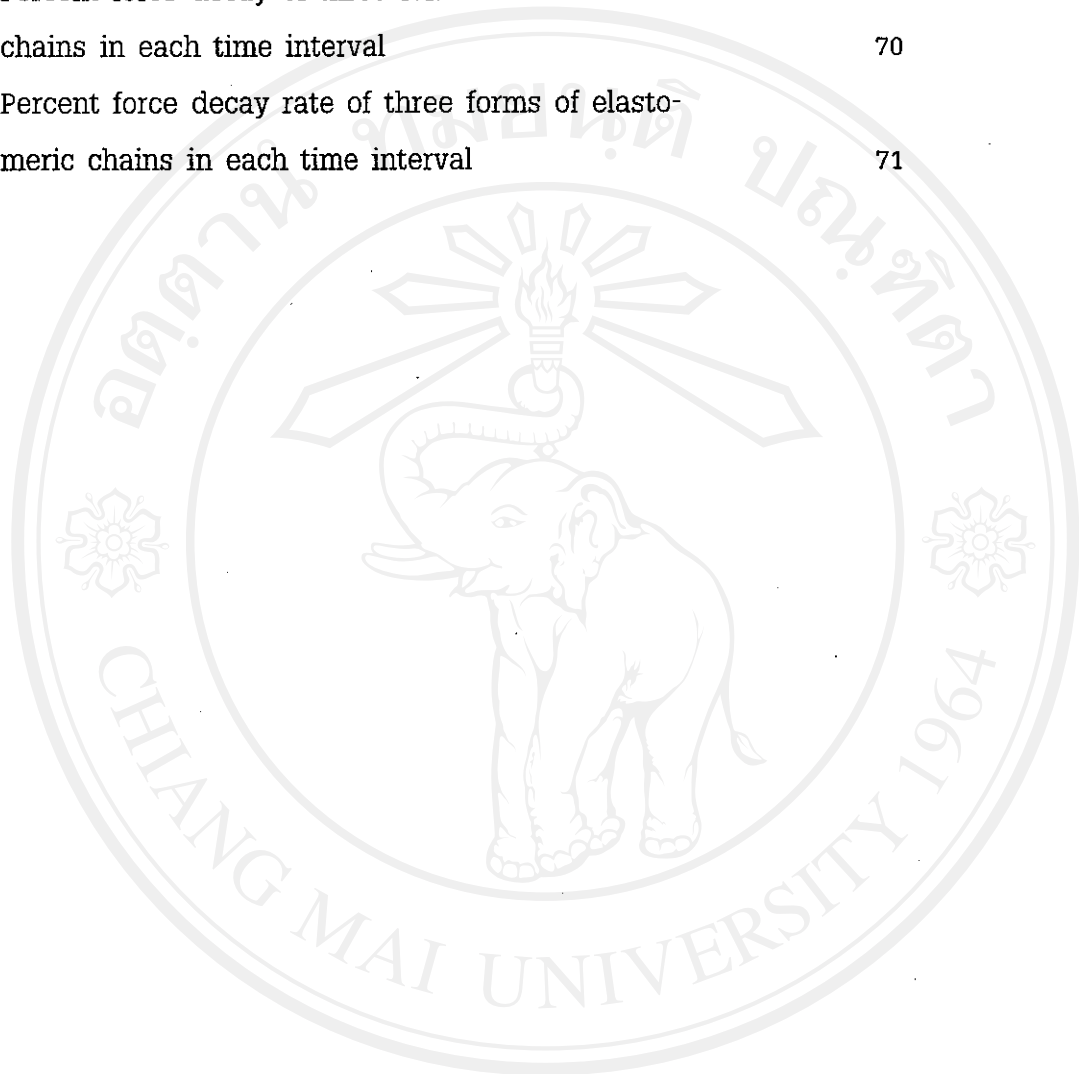

Table	Page
4.16 Multiple comparisons of percent force decay rate of closed space elastomeric chains among seven time intervals by Duncan's multiple range test	73
4.17 Multiple comparisons of percent force decay rate of open space elastomeric chains among seven time intervals by Duncan's multiple range test	74
4.18 Multiple comparisons of percent force decay rate of wide space elastomeric chains among seven time intervals by Duncan's multiple range test	74
5.1 Generated force of C ₄ , O ₃ , and W ₃ groups at initial extension, 22.5 millimeters (Estimated from their force-displacement curves)	84
A.1 Initial pin distance distribution of three groups of metal jigs	96
A.2 Final pin distance distribution of three groups of metal jigs	97

LIST OF ILLUSTRATIONS

Figure	Page
2.1 Some possible molecular structures in polymers	19
2.2 Classification of engineering materials, showing polymer classes	21
2.3 Polyurethane block structure	24
2.4 The force-deformation diagram for the stretched elastomeric module in direct tension	25
2.5 A strain-time plot illustrating the three stages of creep	27
2.6 A force-time plot of polymeric materials under static extension	28
2.7 An example load-deformation diagram of the elastic module with direct tension loaded	29
2.8 A four-part hysteresis diagram for an elastic appliance element	29
3.1 Three forms of elastomeric chain, Ormco [®] Power Chain Generation II	31
3.2 Universal testing machine with vertical stainless steel hooks	32
3.3 Electronic Measuring microscope	33
3.4 Metal jig for providing varied extension of elastomeric chains	34
3.5 The initial pin distance modified from the studies of tooth analysis	35
3.6 The Correx gauge with modified dial	36
3.7 The stable stander with a metal jig and a correx gauge	37
3.8 Incubator, Memmert model 200	38

Figure	Page
3.9 Digital vernier caliper	38
3.10 The original chain length measurement of three-loop open space elastomeric chain	39
3.11 Loading an elastomeric chain on hooks of upper and lower crossheads of the Instron [®] universal testing machine	41
4.1 Three parts of the force-displacement curve of elastomeric chain	49
4.2 Ten samples of force-displacement curves with the elastic limit points of three-loop closed elastomeric chains (C_3)	50
4.3 Ten samples of force-displacement curves with the elastic limit points of four-loop closed elastomeric chains (C_4)	51
4.4 Ten samples of force-displacement curves with the elastic limit points of three-loop open elastomeric chains (O_3)	52
4.5 Ten samples of force-displacement curves with the elastic limit points of four-loop open elastomeric chains (O_4)	53
4.6 Ten samples of force-displacement curves with the elastic limit points of three-loop wide elastomeric chains (W_3)	54
4.7 Ten samples of force-displacement curves with the elastic limit points of four-loop wide elastomeric chains (W_4)	55
4.8 Percent remaining force of three forms of elastomeric chains in each time period	64

Figure	Page
4.9 Percent force decay of three forms of elastomeric chains in each time interval	70
4.10 Percent force decay rate of three forms of elastomeric chains in each time interval	71
