ACKNOWLEDGEMENTS

I would like to express my sincere thanks to my advisor, Assistant Professor Dhirawat Jotikasthira for his helpful guidance, valuable advice, proof of this thesis and encouragement throughout the study especially financial support. I also would like to express my gratitude to my co-advisors: Dr. Suttichai Krisanaprakornkit for his guidance, skillful supervision in cell culture, and encouragement throughout the study, and Associate Professor Samreung Rangdang for providing useful suggestion in flow cytometry. In addition, I wish to gratefully thank Dr. Peerasak Malikaew for his expertise in statistical analyses.

My appreciation is expressed to Mrs. Nongkam Chaiwong for her assistance in analysis by Atomic Absorption Spectrophotometry. I wish to express my gratitude to the Department of Industrial Chemistry, Faculty of Science and the Medical Science Research Equipment Center, Faculty of Medicine, Chiang Mai University for facilitating equipment and work place.

I wish to acknowledge Accord Corporation for supplying the orthodontic magnets (Ormco, USA, Part No. 671-0001). This study was partly sponsored by Internal Research Grant of Faculty of Dentistry, the Graduate School of Chiang Mai University, and Thai Association of Orthodontists. I am grateful to Mr. Somchai Duangtaweesub, my senior orthodontist, for his kindness and endowment.

My special thanks are also extended to all staff of the Orthodontic Department, Faculty of Dentistry, Chiang Mai University for their suggestion and spirit so far. I would like to express appreciation to Ms. Siriporn Leuwitooonvechakit for her shared advice, assistance and good cooperation in every moment of our study.

Last but not least, I am deeply indebted to my family, who always gives love, support, and encouragement. I would like to dedicate my thesis to my parents who always teach me that perseverance is necessary to overcome many obstacles in life.
