### ABSTRACT

The purposes of this research were to compare the ability of the creative writing skill of Prathom Suksa 5 students using Synectics Technique and to compare their abilities in using Synectics Technique with the varieties of creative writing activity. The number of 25 Prathom Suksa 5 students was selected to study in the second semester during 2547 B.E. academic year at Chonprathan Khuean Mae Kuang Jirathiwat Uppratham school in Sansai District, Chiang Mai Province. The tools consisted of 1) eleven the creative writing skill plans and 2) six tests for the creative writing ability. The data derived was analyzed through means, percentage, standard deviation and frequency divided according to creative thinking skill element.

The research showed that :

1. The ability of the creative writing skill using Synectics Technique after study showed higher post - test result when compared to those of the pre - test results at 19.10 percent.
2. The writing activity on the stimulus of tasting showed highest post - test and followed by the writing activity on the stimulus of pictures.
