ACKNOWLEDGEMENTS

I would like to acknowledge the Ministry of University Affairs for a good opportunity for study in this health science program, Graduate school at Chiang Mai University. This program gave me many experiences in research skills and solving problems by scientific ways.

Specially appreciate my supervisor, Dr. Pawin Padungtod, who always provides the invaluable comments and generously guide me in epidemiological research. My thesis is the most important part of my master degree since this is only way of learning and gaining knowledge. Consequently, my supervisor was the most important person, who gave me the tools for my learning and obtaining my knowledge.

I would like to give my sincerely appreciate to my advisory committee, Associated Professor Prasit Tharavichitkul and Professor John B. Kaneene, who have the useful advice and guide me to complete this dissertation.

I am grateful to all staff of Veterinary public health, the Faculty of Veterinary Medicine, Chiang Mai University, for their kindness, helpful, and encouragement. I have gotten good experience with their help and the laboratory facilities. Particularly, Dr.Nattawooti Sthitmatee, who gave me the inspiration in the molecular technique.

There is no word to express my deeply appreciation to my father and mother, who never stop looking after me, and also my family for their eternal love and support.

Tongkorn Meeyam
