Acknowledgements

First and foremost, I express my sincere gratitude to Dr. Manas Suwan and Assistant Prof. Udsadanka Porananond, my independent study supervisor and co-supervisor, for their guidance, supervision, comments, and generous advice. I am very much delighted to give thanks to Associate Professor Lamduan Srisakda, Professor Dr. Suthenee Dontree, Associate Professor Nitaya Praputnitisan and Associate Professor Kannika Phuprasert for their comments. They have always taken care of and have encouraged me with invaluable suggestions to fulfill this research.

I am very grateful for the help I received from the Heinrich Boell foundation, Chiang Mai and wish to thank the whole team for their spirited support and interest they have shown for this research.

I thank all professors and personnel at Graduate School, especially Assoc. Prof. Chukiatt, Assoc. Prof. Prasarn and Mrs. Vilaiporn.

Thanks are also given to my fellow graduate students, especially Mr. Arak Kampanahobwon, Khun Ge, Khun Chai, and all other students who helped with organizing the data needed to fulfill the objectives of this study.

I am deeply grateful to all faculties, the President's office, Mr. Suphab and the student parliament and club.

Thanks to my friends, Neng, Jui, Mary Blake and Dr. Richard Cherry for their support, love and the time they spent to help me with this study.

I wish to thank Mr. Lothar Kinzelmann for his lasting friendship and the many conversations about the environment and human societies we have had over the years and which are the source of inspiration for this study.

And finally I am really grateful and wish to thank my parents and my brother for their love and support and for the example they have been to me. I dedicate this study to Boyan, the latest member born into our family, representing all those who will come after us and have to live in the future world that we shape for them, now.
